Information:

The RANVOO PH5 Middle head is a universal brush head for everyday tooth brushing, ideal for most users. The medium bristle firmness provides comfort and effective cleaning, helping to remove plaque, dental plaque and food debris from the tooth surfaces, including hard-to-reach areas. The head has been designed to fit the RANVOO PH5 toothbrush, supporting sonic action and the microbubble system for more thorough oral hygiene. Regular replacement every around 3 months helps maintain brushing effectiveness and freshness.

Full product description

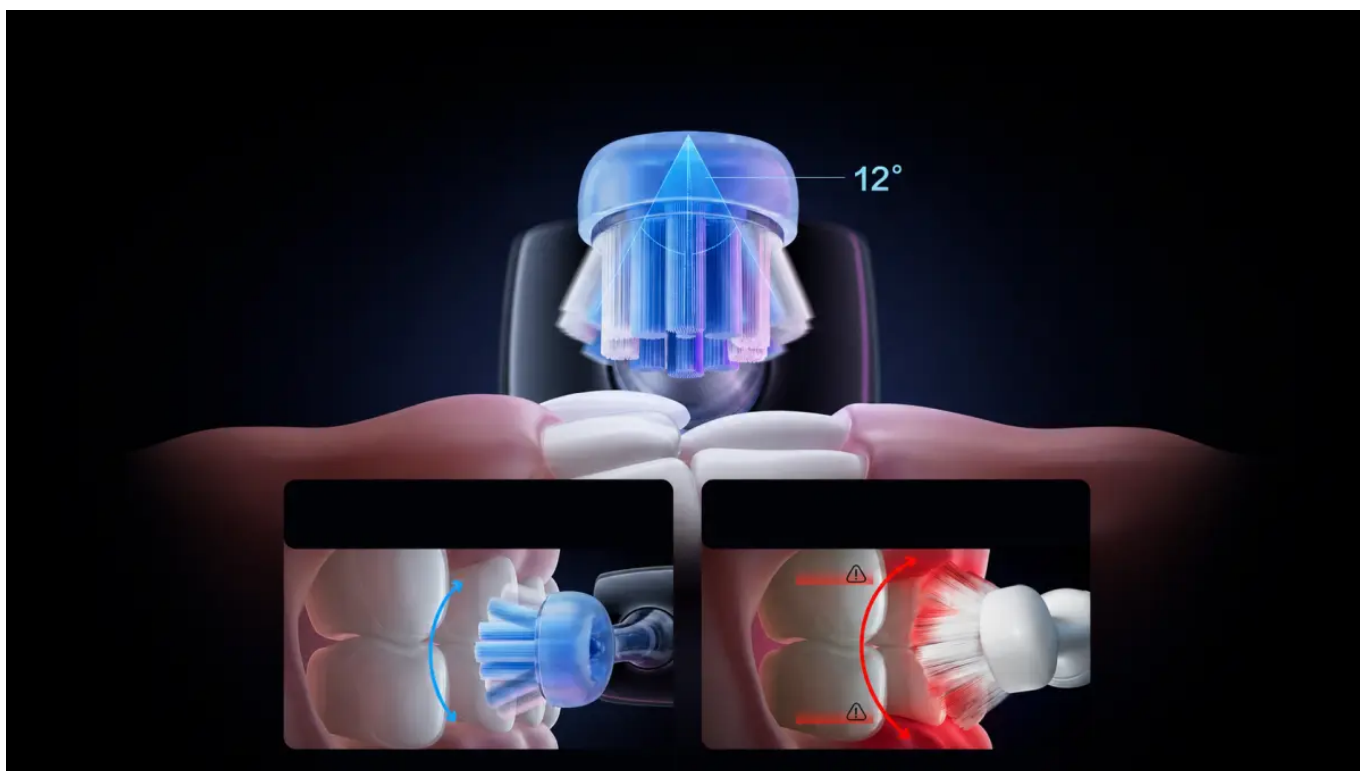

Universal brush head for everyday cleaning

The RANVOO PH5 Middle brush head is the most versatile option, designed for regular tooth brushing. The medium bristle firmness combines user comfort with thorough cleaning.

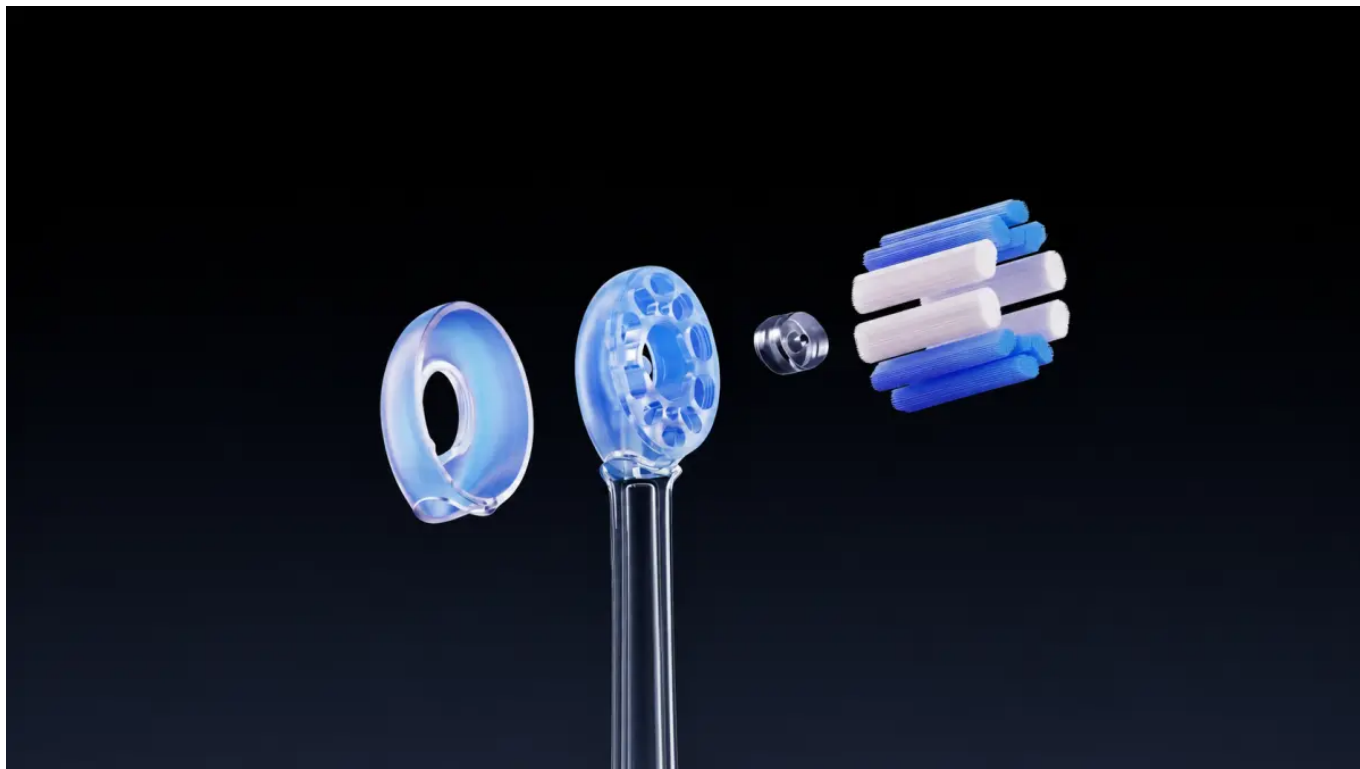

A good choice for most users

The Middle variant is ideal for people who do not need either a very soft or a firmer head. It is a practical solution for everyday oral hygiene.

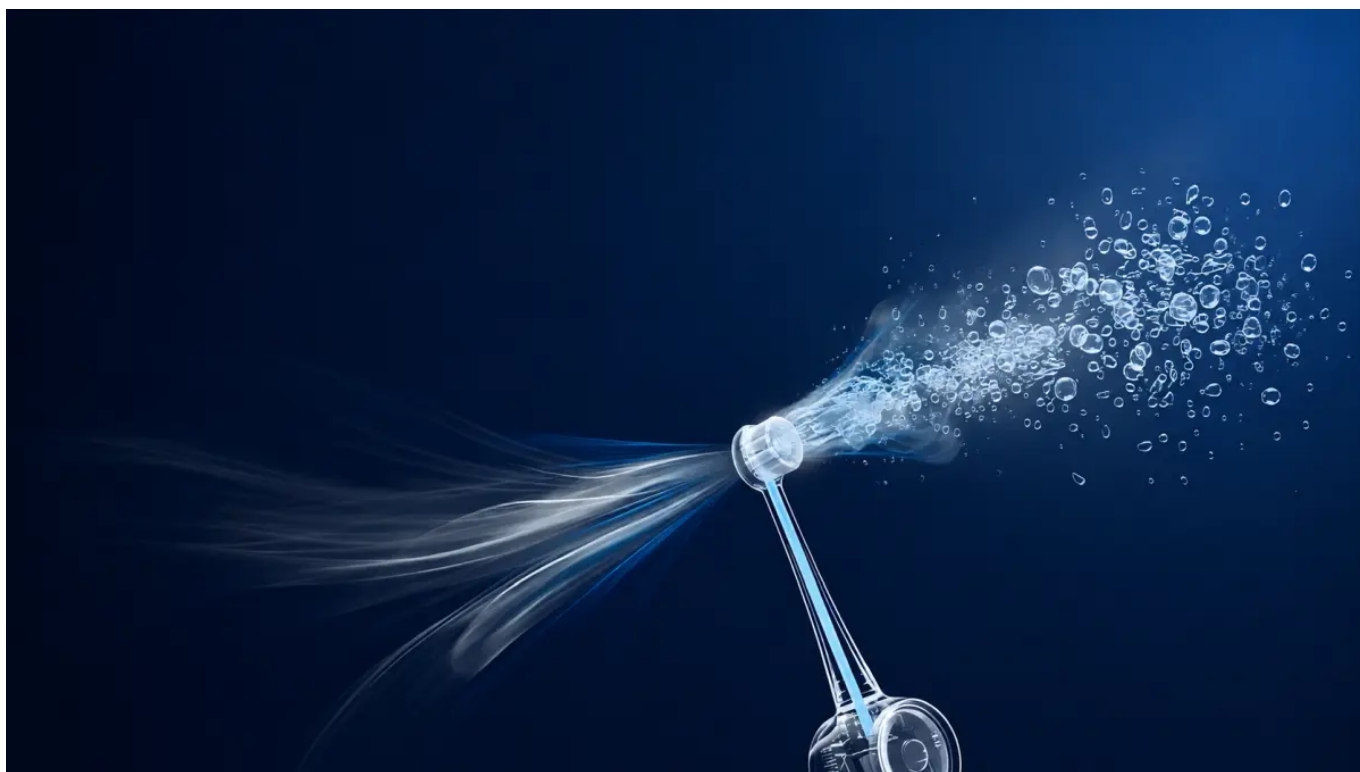

Thorough cleaning of tooth surfaces

The bristles help remove everyday deposits, plaque and food debris. The properly contoured head supports cleaning of both front and back teeth.

Comfortable operation with RANVOO PH5

The Middle head has been matched to the RANVOO PH5 toothbrush, so it can be used with sonic function and a microbubble system. This combination supports more thorough cleaning around the teeth and gums.

Hygiene and ease of use

Regular replacement of the head helps maintain freshness and brushing effectiveness. The tip should be replaced after about 3 months or when the bristles become visibly worn.
