Price: **379.98 zł** gross / 308.93 zł net

Manufacturer: RANVOO

Referention number: DNKGKPNQMRMNP

Information:

RANVOO PQ5 AirJet Pure is a modern toothbrush for people who want thorough but gentler cleaning without aggressive scrubbing or strong vibrations. AirJet Pure technology uses a stream of air and microbubbles to break down plaque, including along the gum line, between the teeth and in hard-to-reach areas, while also caring for the comfort of the gums and enamel. The slim, lightweight design sits comfortably in the hand, and the magnetic wall mount makes storage and charging easier. The set includes a full-size travel case, and the brush head has antibacterial bristles, fluoride-infused bristles and colour-changing bristles that remind you when it is time to replace it.

Full product description

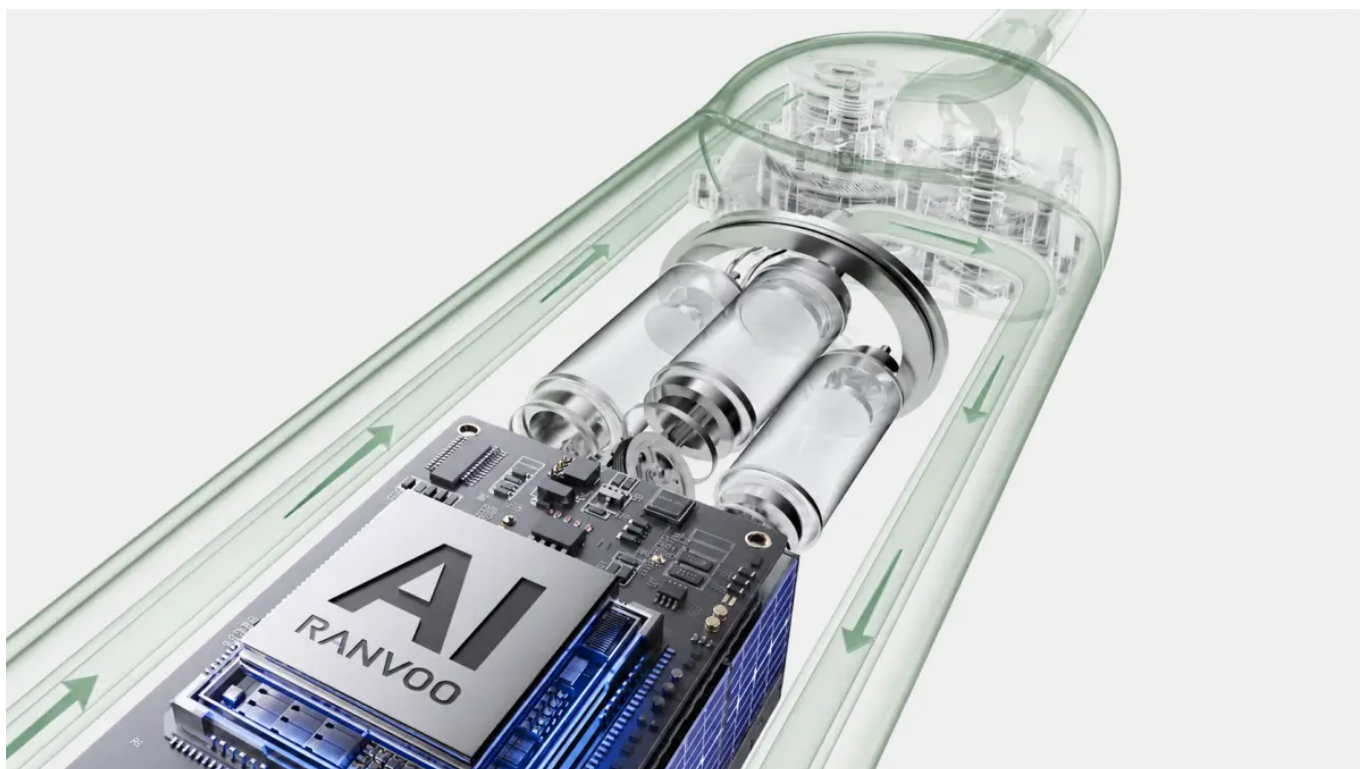

A New Era of Everyday Oral Care

RANVOO PQ5 AirJet Pure is a toothbrush designed for people who want to clean their teeth thoroughly, but without aggressive scrubbing or strong vibrations. Air-powered technology combines effective plaque removal with gentler gum care, making daily brushing more comfortable. The slim design, lightweight body and elegant finish mean the toothbrush looks great in the bathroom and sits comfortably in the hand.

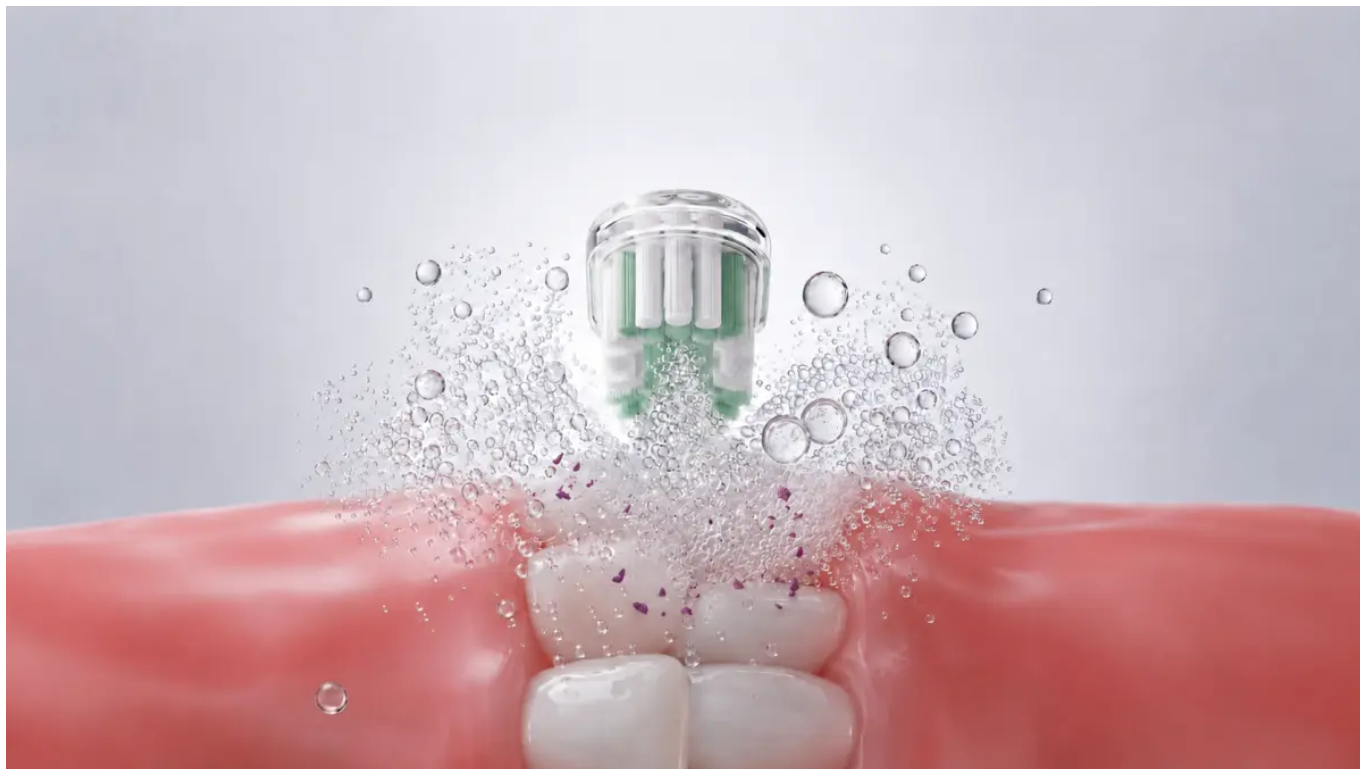

AirJet Pure and Microbubbles

At the heart of the RANVOO PQ5 is AirJet Pure technology, which uses a stream of air and microbubbles to break down plaque. The bubbles work where bristles alone have limited reach — along the gum line, between teeth and in hard-to-reach areas. As a result, the toothbrush helps remove plaque more precisely while reducing the intense friction typical of traditional brushing.

Gentle on Gums

RANVOO PQ5 AirJet Pure was created as an alternative to classic brushing based mainly on mechanical friction. Microbubbles lift and break down plaque, helping to clean teeth without vigorous scrubbing. This solution is especially suitable for people who want thorough cleaning but prefer gentler contact with the gums and enamel.

Ready for the Bathroom and Travel

RANVOO PQ5 AirJet Pure works well both at home and away. The magnetic wall mount serves as both storage and charging, helping keep the handle drier and the countertop tidy. The full-size travel case holds the entire toothbrush together with the head, so you can easily take it to work, on a trip or to the beauty salon. In addition, the head features antibacterial bristles, fluoride-infused bristles and colour-changing bristles that remind you when it is time to replace the head.

Intelligent Cleaning System

The toothbrush uses the Bubble+ Smart Core system, which supports the AirJet technology and is responsible for a more comfortable brushing experience. The design includes an AirJet nozzle, micro air flow, a bubble penetration system and a fluid motor that helps break down plaque at the source. Touch control that responds to pressure helps maintain a smooth, sealed body surface, reducing places where plaque could build up.
