Information:

RANVOO PH3 AirJet Teenager is an electric toothbrush designed for teenagers, combining gentle and effective cleaning with everyday convenience. AirJet 4.0 technology, a mini round head and soft antibacterial fluoride bristles help remove food debris and reach hard-to-access interdental spaces, supporting protection against tooth decay. The ergonomic handle provides a secure grip, while the 12° micro-movement system ensures gentle care for the gums. The bristles change colour after around 2 months, reminding you to replace the head. The magnetic holder and wall charging make hygienic storage easier.

Full product description

Gentle and effective cleaning

RANVOO PH3 AirJet Teenager in purple has been designed with teenagers' daily oral hygiene in mind. AirJet 4.0 technology, combined with soft, antibacterial fluoride-infused bristles, helps remove food debris and keeps even hard-to-reach interdental spaces clean. The mini round head makes thorough brushing easier and helps protect growing permanent teeth from tooth decay.

Comfortable design for a teenager

The ergonomic handle fits well in the hand, making it easier to control movements while brushing. This design helps with everyday use and makes toothbrushing more comfortable. The magnetic wall mount allows the toothbrush to be stored in a dry and tidy place, promoting hygiene and easy access to the device.

Advanced head mechanism

A precise mechanism has been used in the head design to support cleaning of interdental spaces. AirJet technology enables access to harder-to-reach areas, helping protect teeth from decay and supporting teenagers' oral hygiene.

Wear monitoring and gum protection

The 12° micro-movement system supports gentle gum care, and the bristles change colour from blue to transparent after about 2 months, reminding you to replace the head. Different bristle variants adapt to the needs of growing permanent teeth, ensuring comfortable use.

Safe and hygienic charging

The toothbrush is made from materials that are safe for health and convenient for everyday use. Low-vibration technology protects tooth enamel and roots, while magnetic wall charging keeps the device in a dry, hygienic and easily accessible place.
