Information:

Xiaomi REDMI Watch 6 NFC is a smartwatch with a large, square 2,07" AMOLED display with high brightness of up to 2000 nits, ensuring excellent readability in sunlight and smooth interface performance. It offers over 150 sports modes, built-in GNSS with 5 satellite systems for accurate route tracking, and 24-hour monitoring of heart rate, SpO2, stress and sleep. The slim, lightweight aluminium case is comfortable for everyday wear, while the rotating crown and additional button make it easy to use. The watch supports Bluetooth calls, NFC payments, has 5 ATM water resistance and a battery life of up to 24 days.

Full product description

Xiaomi REDMI Watch 6 NFC - large AMOLED display for everyday use

Xiaomi REDMI Watch 6 NFC offers a square 2.07-inch AMOLED display that makes it easy to read the time, notifications, activity results and health data. The 432 × 514 pixel resolution, 324 PPI density and 60 Hz refresh rate ensure that content is clear and navigation through the interface remains smooth. The screen covers 82% of the front of the case, and the symmetrical bezels are 2 mm wide. The 1500-nit HBM brightness and peak brightness of up to 2000 nits help you read information even when using the watch outdoors. The available Always-on Display mode lets you check the time without waking the full interface each time.

Over 150 sports modes and activity tracking

REDMI Watch 6 NFC can accompany the user during running, cycling, hiking, gym workouts and many other forms of exercise. The watch offers over 150 sports modes, helping to tailor the way data is recorded to the chosen activity. During training, the device can monitor heart rate and estimated energy expenditure in real time, making it easier to analyse exercise intensity and compare subsequent sessions. Activity information is saved on the watch and can be synchronised with the Mi Fitness app, which makes it easy to review training history and track progress.

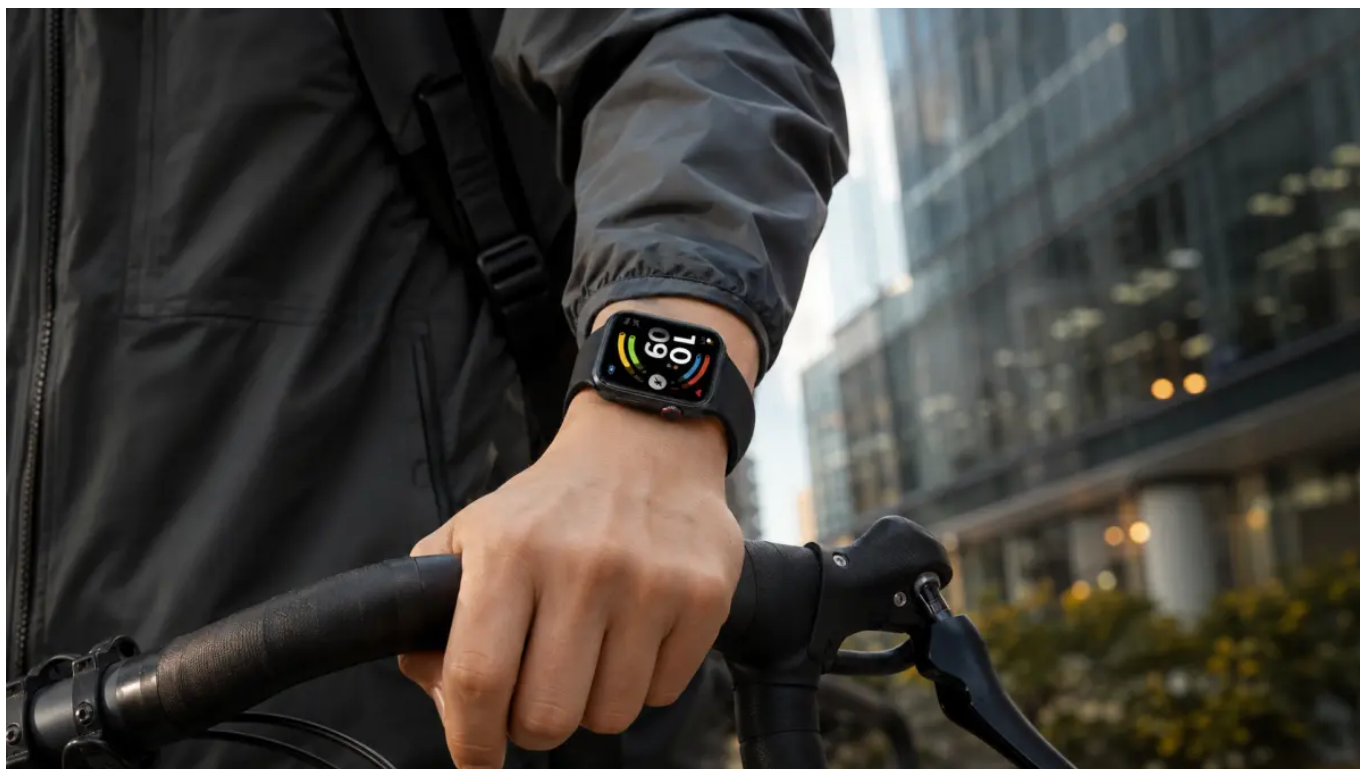

24-hour health monitoring

A set of sensors enables round-the-clock monitoring of heart rate, blood oxygen, stress levels and sleep once the relevant functions are enabled. The watch can display alerts about an unusual heart rate or a too-low blood oxygen level, helping draw attention to changes recorded during the day. Sleep analysis lets you observe the course of rest, while four breathing exercise techniques support moments of calm. A women's health management function with cycle reminders is also available. The 5 ATM water resistance rating allows the device to be used while swimming in a pool and in shallow waters, and the watch also supports heart rate measurement while swimming.

Built-in GNSS for outdoor activity

The built-in GNSS module enables route tracking during outdoor workouts without the need to use the smartphone's positioning system. The watch supports five satellite systems: GPS, Galileo, GLONASS, BeiDou and QZSS. The dual L1 antenna arrangement automatically selects the antenna receiving the stronger signal depending on how the device is worn. This solution helps to record the course of a run, cycle ride or hike reliably, even in places where buildings or terrain may make signal reception difficult.

Slim design and convenient controls

The watch case measures 46.45 × 40.03 × 9.94 mm, and weighs about 31 g without the strap. The aluminium alloy frame combines low weight with a design suited to everyday wear. The touchscreen is complemented by two physical controls: a stainless steel rotating crown and an additional button that provides access to the control centre, power menu and configured emergency contact. The quick-release system makes strap changes easy, and automatic interface orientation adjustment allows the device to be worn comfortably on either the left or right wrist.

Long battery life, Bluetooth calls and NFC payments

The 550 mAh battery offers up to 24 days of use with light usage, up to 12 days with normal usage and up to 7 days with intensive use of the watch's functions. The built-in microphone and speaker enable Bluetooth calls when paired with a smartphone, so you can answer a call without taking out your phone. The NFC variant supports contactless payments with Mastercard and Visa cards at compatible terminals, although service availability depends on the region, bank and supported card. Bluetooth 5.4 connectivity allows notifications and data to be synchronised with the Mi Fitness app, and the remote camera control function lets you use the watch as a phone shutter release.

Specification

Parameter	Details
Model	REDMI Watch 6 NFC
Display type	Square AMOLED display

Parameter	Details
Display diagonal	2.07 inches
Resolution	432 × 514 pixels
Pixel density	324 PPI
Refresh rate	60 Hz
Display brightness	HBM 1500 nits, peak brightness up to 2000 nits
Screen-to-body ratio	82%
Dimensions	46.45 × 40.03 × 9.94 mm, without strap and protruding elements
Weight	About 31 g without strap
Frame material	Aluminium alloy
Strap material	TPU
Wrist circumference	About 135-205 mm
Sensors	Heart rate sensor with blood oxygen sensor, accelerometer, gyroscope, ambient light sensor, electronic compass
Positioning systems	GPS, Galileo, GLONASS, BeiDou, QZSS
Sports modes	Over 150
Water resistance	5 ATM
Battery capacity	550 mAh
Battery life	Up to 24 days with light use, up to 12 days with normal use, up to 7 days with intensive use
Wireless connectivity	Bluetooth 5.4
NFC	Supported
Microphone and speaker	1 microphone, built-in speaker
Local storage	512 MB, actual available space is smaller due to the system and installed software
Compatibility	Android 8.0 or later, iOS 14.0 or later
Package contents	REDMI Watch 6, magnetic charging cable, user manual with warranty information

Health monitoring functions are not intended for diagnosing, preventing or treating diseases. Battery life depends on configuration, active functions and usage patterns. The 5 ATM rating does not cover hot showers, saunas, diving or activities involving fast-moving water. NFC payment availability may vary depending on the region, bank and card type.
