Information:

Xiaomi Sound Play 18W is a portable Bluetooth speaker combining 18 W of power with a compact, stylish casing and striking backlighting. Thanks to its full-range driver, passive radiators and 75 Hz-20 kHz range, it delivers fuller, clear sound for music, podcasts and everyday listening. Bluetooth 6.0 ensures quick pairing and a range of up to 25 m, while the built-in microphone enables hands-free calls. The battery provides around 14 hours of use, and the IP68 rating increases durability outdoors. The model supports TWS and Auracast, and the soft strap makes it easy to carry.

Full product description

Xiaomi Sound Play 18W - music that suits every occasion

Xiaomi Sound Play 18W is a portable Bluetooth speaker designed for everyday music listening at home, on the patio, during get-togethers with friends and outdoors. The 18 W rated power means the device performs well both for relaxed background listening and for more energetic playlists. The slim housing, colour variants and striking lighting help create a pleasant atmosphere without the need for additional accessories. It is an option for people who want equipment that is easy to carry, convenient to use and suited to many usage scenarios.

18 W sound with a design supported by passive radiators

The speaker uses a full-range racetrack-type driver and an external and internal passive radiator, which helps deliver fuller sound in a compact enclosure. The 75 Hz–20 kHz frequency range lets you comfortably listen to different music genres, from podcasts and light playlists to more dynamic tracks with pronounced bass. A signal-to-noise ratio of at least 95 dB ensures cleaner sound reproduction, making the speaker suitable for use at a desk, while cooking, relaxing in the living room or meeting outdoors. Xiaomi Sound Play 18W combines a portable format with enough power for everyday sound in the spaces you use most often.

Bluetooth 6.0 and convenient cable-free connection

Xiaomi Sound Play 18W uses Bluetooth 6.0 connectivity, which enables quick pairing with a phone, tablet or other compatible device. The declared transmission range is up to 25 metres, so the speaker can stand on a table, shelf, picnic blanket or by a workstation, while the music source remains within reach. The built-in microphone allows hands-free calls, which is useful when the phone is lying nearby or when the user wants to answer a call without interrupting what they are doing. It is a practical solution for remote work, relaxation, short trips and everyday home situations.

Striking lighting synchronised with the beat

The Sound Play 18W model stands out not only for its sound, but also for its lighting, which helps build the atmosphere while listening to music. The top light with an infinity mirror effect evokes a light tunnel, and the lower light ring can operate in ripple, beat and constant light modes. As a result, the speaker looks good both during an evening gathering and when listening to music quietly in a room. The beat-synchronised lighting adds character to the device and makes it part of the room's décor.

Portable design for trips, walks and outdoor meet-ups

The housing measuring $63.4 \times 69.5 \times 201.1$ mm and weighing around 415 g makes the speaker easy to take with you outside the home. A soft rubber strap makes it easier to carry, attach to a backpack or conveniently place the device wherever it is needed. The IP68 protection class according to the manufacturer's data helps protect the device against dust and water under specified test conditions, so the speaker is well suited to use on a patio, at a campsite or on a picnic. However, it is worth remembering that this is not a professional waterproof speaker and it should not be used or charged underwater or in a damp environment.

Up to around 14 hours of playback on a single charge

The built-in 3.7 V / 2600 mAh lithium-ion battery allows music playback for up to around 14 hours on a full charge, according to the manufacturer's measurement at 40% volume with the lighting turned off. Such battery life is useful during the day when the speaker accompanies the user while working, studying, cooking, relaxing or meeting loved ones. 5 V / 2 A charging makes it easy to replenish the battery after listening, and the lack of a need for constant mains power increases placement flexibility. Actual operating time may depend on the volume level, lighting mode, audio source and how the device is used.

TWS and Auracast for greater playback flexibility

Xiaomi Sound Play 18W supports TWS mode, which allows two identical speakers to be paired into a stereo set with left and right channels. This feature is useful when the user wants a wider soundstage while listening to music in the living room, at a party or in a larger space. The speaker also supports Auracast, a solution that allows multiple compatible Xiaomi devices supporting this technology to be connected, up to a maximum of 100 units according to the manufacturer's data. As a result, Sound Play 18W can become part of a larger audio setup with synchronised sound and light.

Four colours and a style that is easy to match to your surroundings

The speaker is available in black, white, purple and green, allowing you to choose a version that suits your style, interior or way of using it. The minimalist shape, soft lines of the housing and light accents make the device look good on a desk, sideboard, coffee table, by a tent or on a picnic blanket. The set includes the Xiaomi Sound Play speaker, a charging cable and a user manual, so the user receives all the basic items needed to start using the device. It is a compact Bluetooth speaker for people who expect a combination of portability, pleasant sound, striking looks and simple operation.
