Information:

Xiaomi Redmi Watch 6 is a slim smartwatch with a large 2,07-inch 60 Hz AMOLED display with high brightness of up to 2000 nits, ensuring excellent readability even in sunlight. The lightweight case with an aluminium frame, rotating crown and button offers convenient operation and quick strap changes. Built-in GNSS with 5 satellite systems allows accurate route tracking without a phone, and over 150 sports modes support training. The watch is 5 ATM water-resistant, enables Bluetooth calls and lasts up to 24 days on a single charge. It monitors heart rate, SpO2, stress and sleep, helping you take better care of your daily wellbeing.

Full product description

Large AMOLED display for easy information reading

The Xiaomi Redmi Watch 6 is equipped with a square AMOLED display with a 2.07-inch diagonal, a resolution of 432 × 514 pixels and a density of 324 ppi. The 60 Hz refresh rate contributes to smooth menu scrolling, widget operation and notification browsing. Slim, symmetrical 2 mm bezels have made it possible to achieve a screen-to-body ratio of 82%. HBM brightness is 1500 nits, while peak brightness can reach 2000 nits in a specific area of the display, which helps when using the watch outdoors.

REDMI Watch 6

Duży ekran, wielkie możliwości

Wyświetlacz AMOLED 2,07" · Obudowa 9,9 mm · Do 24 dni pracy na baterii

Slim design with an aluminium frame

The watch case is about 9.94 mm thick, and its weight without the strap is about 31 g, so the device sits comfortably on the wrist during work, rest and physical activity. The aluminium frame combines lightness with the durability needed for everyday use. The rotating stainless steel crown and additional button allow you to navigate the menu efficiently, open the control centre and use shortcuts. The user can also choose from many watch faces, enable Always-On Display mode and quickly change the strap thanks to the one-press release mechanism.

Built-in GNSS for recording outdoor activities

The Xiaomi Redmi Watch 6 supports five satellite positioning systems: GPS, Galileo, GLONASS, BeiDou and QZSS. The dual L1 antenna design allows the watch to select the antenna receiving the stronger signal depending on how the device is worn. The built-in GNSS enables route recording during running, cycling, hiking and other outdoor activities without the need to use the phone's location module. The saved data can then be analysed in the Mi Fitness app.

5 ATM water resistance

The 5 ATM resistance rating allows the watch to be used while swimming in a pool and during many activities in which the device may come into contact with moisture. The smartwatch can also accompany the user during training sessions carried out in changing weather conditions. However, the manufacturer states that the watch is not intended for diving, sauna use, hot showers or contact with high-speed water jets. Water resistance is not a permanent property and may decrease over time.

Over 150 sports modes

The Redmi Watch 6 offers over 150 sports modes, helping to record both popular workouts and less typical forms of exercise. During running, cycling, hiking and other exercises, the watch can monitor, among other things, activity time, heart rate and energy expenditure. The sensors and algorithms used also support heart rate measurement while swimming. The collected information makes it easier to track training regularity, compare successive sessions and better understand the body's response to exertion.

Up to 24 days of battery life and Bluetooth calls

The 550 mAh battery allows the watch to run for up to 24 days with light use, up to 12 days in a typical scenario and up to 7 days with intensive use of its functions. Actual battery life depends, among other things, on display settings, measurement frequency, the number of notifications, calls and workouts with active GNSS. The built-in microphone and speaker enable Bluetooth calls after connecting the smartwatch to a smartphone. The watch also displays notifications, reminders and alarms, and the linear motor offers over 20 vibration patterns to help distinguish between individual alerts.

Health, sleep and everyday wellbeing monitoring

The Xiaomi Redmi Watch 6 helps monitor heart rate, blood oxygen levels, stress and sleep patterns throughout the day and night. The device also offers alerts for unusual heart rate or low oxygen levels, breathing exercises and features supporting menstrual cycle tracking. Health functions are for informational purposes only, and the watch is not a medical device and is not intended for diagnosing or treating illnesses.
