Information:

Momcozy CozyBreath Baby Air Purifier is a home air purifier designed for a baby's or young child's room. The four-layer filtration system helps remove dust, pollen, pet hair, bacteria, viruses and unpleasant odours, while the CADR performance of approx. 80 m³/h supports effective air circulation in small and medium-sized rooms. Quiet operation, night mode and gentle lighting promote peaceful sleep. The PM2.5 indicator allows real-time monitoring of air quality, and the filter replacement reminder makes everyday use easier. The device is also suitable for the living room and other rooms in the home.

Full product description

Momcozy CozyBreath Baby Air Purifier - support for cleaner air in your child's space

Momcozy CozyBreath Baby Air Purifier is a device designed for home use, especially in rooms where infants and young children stay. It helps reduce pollutants present in the air, such as dust, pollen, bacteria, viruses, pet hair and unpleasant odours.

Intuitive operation and everyday control

The control panel allows quick adjustment of operating modes to the conditions in the room. The device enables convenient management of the purifier in everyday use.

Operation in a child's space

The device can operate in the immediate vicinity of the cot, helping to maintain stable air conditions during sleep and rest.

Quad-Layer Filtration System

The filtration system is based on four layers that work together to help remove pollutants from the air:

- Pre-Filter – traps larger particles such as dust and pet hair
- Silver-Ion Filter – helps reduce bacteria
- H13 HEPA Filter – filters fine particles, including viruses and suspended dust
- Activated Carbon – helps neutralise unpleasant odours

Purification performance and airflow

The device achieves a CADR of around 80 m³/h, helping to ensure effective air circulation in small and medium-sized children's rooms.

Night mode and sleep comfort

Quiet operation and gentle lighting allow the device to be used at night without disturbing the child's sleep.

Real-time air quality monitor

The built-in PM2.5 indicator allows ongoing monitoring of air quality:

- 0-50 $\mu\text{g}/\text{m}^3$ – very good air quality
- 51-100 $\mu\text{g}/\text{m}^3$ – moderate air quality
- 101-500 $\mu\text{g}/\text{m}^3$ – poor air quality

The system visually indicates the condition of the air in the room.

Filter replacement and service life cycle

The device has a reminder function for filter replacement. The recommended service life is around 3 months, depending on usage conditions.

Use throughout the home

The device works well not only in a child's room, but also in the living room or other rooms where improving air quality for the whole family is important.
