### Information:

Momcozy DP01 is a practical nappy bin with a triple-seal system that helps effectively reduce unpleasant odours in the baby's room. The rotating lid, sealing ring and patented bag clamp ensure hygienic use at every stage. The wide opening allows nappies to be dropped in with one hand, while the ergonomic height increases everyday convenience. The bin works with most standard 50 l bags, has a 22 l capacity, safety locks, a transparent window to check fill level, and an easy-to-clean removable top. The included odour absorber helps maintain freshness and comfort of use.

### Full product description

#### Momcozy DP01 - nappy bin with triple sealing

Momcozy DP01 is a practical nappy bin designed for everyday baby care and keeping the nursery fresh. The triple-seal system helps limit the spread of unpleasant odours from the moment the nappy is dropped in until the bag is changed. As a result, the bin is ideal by a changing table, in the parents' bedroom, or anywhere quick and hygienic disposal of used nappies is important.

## Triple protection against odours

The Triple-Seal system works at several stages of use. The rotating lid creates the first barrier when the nappy is dropped in, the sealing ring helps close the space between the chamber and the opening, and the patented bag clamp limits contact with odours when emptying the bin. This solution helps create more comfortable conditions in the nursery and makes it easier to keep things tidy without frequent trips to an outdoor waste container.

## Convenience during everyday changing

The wide opening of the bin allows a nappy to be dropped in quickly with one hand, which is especially important when the other hand is occupied with the baby. The ergonomic height reduces the need to bend down often, so the bin fits well into the daily changing routine from the first weeks of a baby's life through to the nappy-wearing stage of an older child. The simple white design blends well with a light nursery interior.

### Hygienic use without unnecessary contact

The rotating lid mechanism helps reduce direct hand contact with the inside of the bin, increasing comfort during frequent nappy changes. The bin has been designed for use in a child's space, so it is also fitted with safety locks that help prevent accidental opening by a child or pet. This solution supports cleanliness, convenience and better organisation by the changing table.

### Standard bags and easy emptying

Momcozy DP01 does not require dedicated refills, as it works with most standard 50-litre bin bags. This helps reduce running costs and makes it easy to use bags already available at home. The patented clamp seals the bag before removal, limiting contact with the contents during changing. A transparent window allows you to quickly check how full it is without opening the bin.

### Large capacity and easy cleaning

The 22-litre capacity means the bin helps reduce how often bags need changing, which is especially useful during heavy nappy use. The removable top section can be rinsed with water, making it easier to keep the bin clean. The included odour absorber helps keep the interior fresh, and the whole design works well as a permanent piece of nursery equipment.
