Manufacturer: MOMCOZY

Referention number: DNKGKPIRMLM

Information:

Compact thermometer for monitoring the temperature in a baby's surroundings, ideal for home and travel. It allows convenient checking of readings in the nursery, by the cot, in the bathroom or during walks. Thanks to integration with a mobile app, it lets you track data without disturbing the child's sleep and supports daily care in various situations. The practical case makes storage, carrying and keeping things tidy among children's accessories easier.

Full product description

Temperature monitoring in the home environment

The device in an open case has been presented in the friendly interior of a children's room, where it helps maintain constant temperature control in the baby's surroundings. The solution supports everyday care, making it easy to check readings in various home situations.

Mobility and convenient carrying

The thermometer has been shown in a bag with baby accessories, highlighting its practical use when travelling. Its compact form makes it easy to take on a walk, to a doctor's appointment or on a trip, supporting temperature monitoring away from home.

Everyday routine in the bathroom

In the bathroom space, the device can be stored in an open case, making it easy to access quickly during baby care. This way of organising supports tidiness and efficient use during everyday tasks.

Support by the baby cot

Placed near the cot, the device allows the baby's temperature to be monitored on an ongoing basis, and the data can be displayed in the mobile app. This gives the carer access to information without disturbing the baby's sleep.

Family setting and everyday monitoring

In the living room, the device supports monitoring the child's temperature during the family's daily activities. Integration with the mobile app makes it easier to check readings in the background of home life.

Help during walks and outdoor activities

During walks, the pushchair and baby accessories can be complemented by a device that supports temperature monitoring. The solution also allows readings to be observed away from home.

Organisation of the children's space

Storing the device among children's clothes and accessories makes it easy to find quickly and use every day. This solution supports an orderly organisation of the space.

Peaceful sleep and temperature control

The device placed near a sleeping baby allows the conditions in the room to be monitored continuously. Working with the mobile app provides convenient access to data without disturbing the child's sleep.
