Manufacturer: EXTRALINK

Referention number: DNXGKPNQFRMNGK

Information:

A modern massage chair with Zero Gravity position provides complete relaxation and ergonomic body support. It offers a comprehensive full-body massage thanks to 16 air cushions and rollers massaging the neck, back, waist and buttocks, with adjustable intensity and zone selection. For even greater comfort, there is foot massage, heated calf massage and a telescopically adjustable leg section. Operation is intuitive thanks to a large touch screen in Polish, a quick-access button and AI voice control, while Bluetooth lets you listen to music during the massage. Built-in sensors monitor heart rate, blood oxygen level and blood pressure, and ambient lighting creates a pleasant atmosphere.

Full product description

Massage in Zero Gravity position

The chair uses a design inspired by zero gravity, which allows free adjustment of the reclining angle and adaptation of the position to the user's preferences. Its ergonomic shape envelops the body, supporting comfort during sessions. A large touchscreen with a Polish-language interface makes it easy to access the available operating modes.

Comprehensive full-body massage

A system of 16 air cushions arranged in different zones delivers a full-body compression massage. Rollers provide a buttock massage and kneading for the neck, back and waist areas. The available settings allow the action to be focused on selected parts and the massage intensity to be adjusted.

Relaxation for legs and feet

The chair offers foot massage performed by special rollers and a heated calf massage, which increases relaxation comfort. The telescopically extendable leg section allows the length of support to be adjusted, helping to adapt the design to the user's height and build.

Intuitive function control

The chair is operated using a touchscreen and a quick-access button located in the armrest. AI voice control allows settings to be selected without using the panel, while the Bluetooth module enables music playback during the massage.

Parameter monitoring functions

Built-in sensors enable heart rate, blood oxygen level and blood pressure to be monitored while using the chair. The side elements of the armrests are fitted with blue "breathing light" illumination, which creates a pleasant atmosphere conducive to relaxation.

Set contents

The set includes a massage chair, a power cable and an instruction manual. The package contains the items needed to start using the device after preparing a suitable place and connecting it to the power supply.
