Manufacturer: EXTRALINK

Referention number: DNXGKPNQHRMNII

Information:

The 3D massage chair on the SL track provides comprehensive relaxation thanks to a 6-wheel 360° kneading massage mechanism for the neck and shoulders, and rollers guided along the natural line of the spine from the upper to the lower back. It offers 30 massage programmes, including 24 automatic and 6 manual, with convenient control via a touch screen and shortcuts on the armrest. The back and waist heating function, 16 air bags, adjustable footrest and shoulder area adjustment increase comfort and massage effectiveness. Safety is ensured by an anti-pinch sensor system, while the stylish design is complemented by HIFI audio with a subwoofer.

Full product description

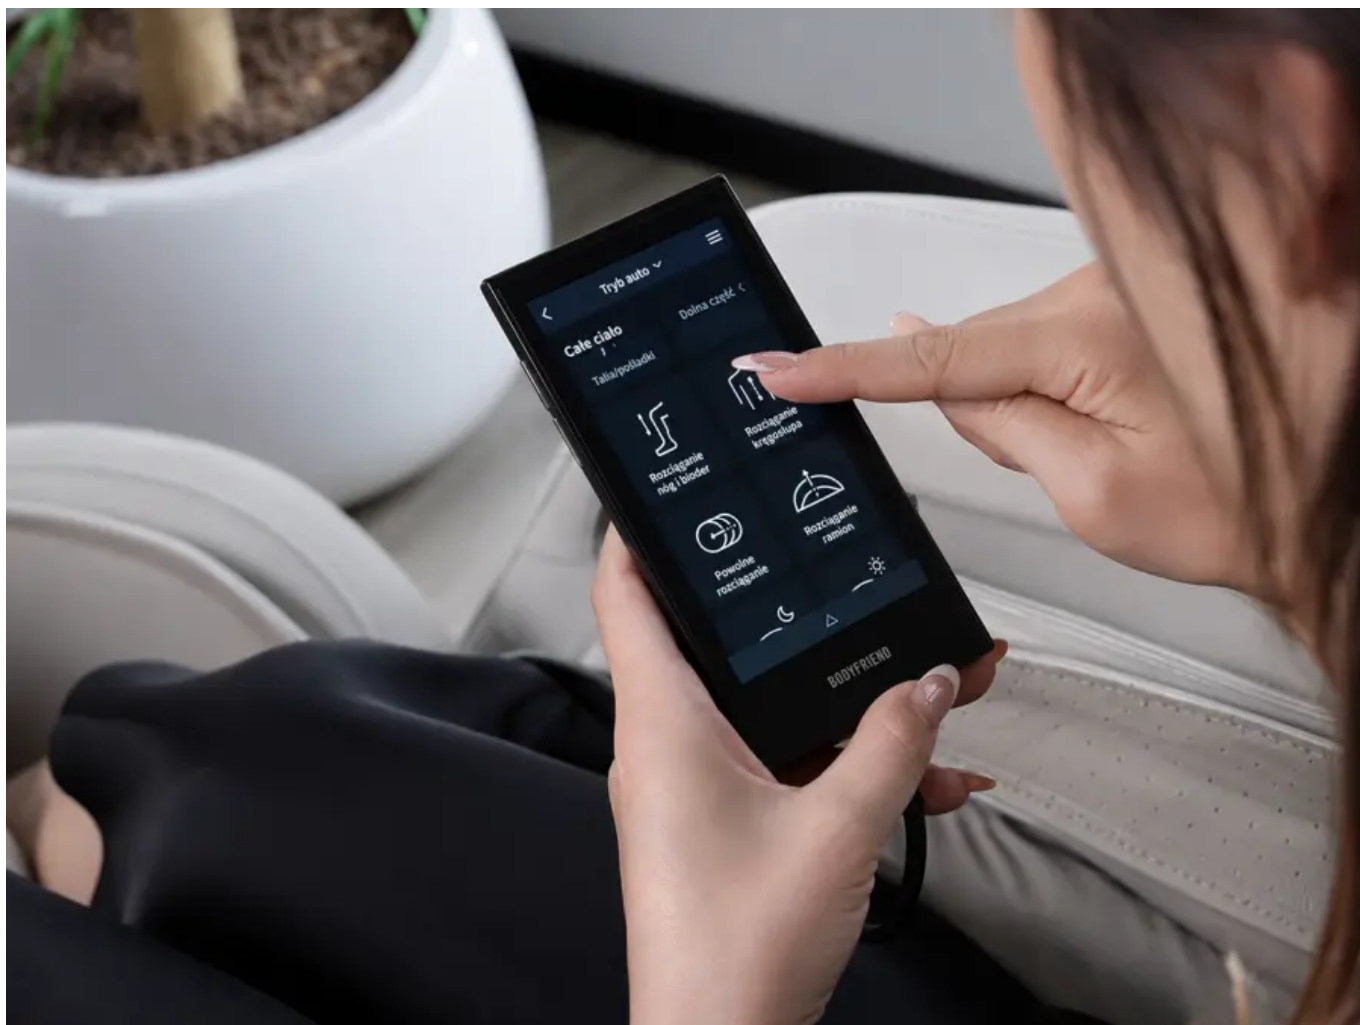

3D massage on the SL track

The 6-wheel 3D movement mechanism delivers a kneading massage within a 360° range in the neck and shoulder area. The extended SL track guides the rollers along the natural line of the spine – from the upper back all the way to the lower body. This design allows a wide massage area to be covered and the mechanism's operation to be adjusted to the user's position.

30 massage programmes

The chair offers 24 automatic programmes and 6 manual programmes. The preset modes let you quickly start the chosen type of massage, while the manual settings allow you to tailor its operation to your current needs. The touch screen and shortcut buttons on the armrest make it easy to change settings without interrupting your rest.

Heat for the back and waist

The constant-temperature heating function covers the back and waist area. Gentle warmth helps you relax during the massage and increases comfort on colder days. The high-density sponge adapts to the body position, and the soft upholstery creates a comfortable surface for longer rest.

Adjustable chair position

The electrically extendable footrest allows you to position your legs comfortably and adjust the chair to suit relaxation. In the upright position, the structure is approximately 70 cm wide and 110 cm high. When reclined, it reaches approximately 175 cm in length and 89 cm in height.

Leg compression massage

The system of 16 air cushions complements the 3D mechanism with a rhythmic compression massage. The cushions placed in different zones of the chair alternately inflate and deflate. Elements surrounding the calves and feet help extend the massage to the lower legs as well.

Shoulder area adjustment

The manually extendable air cushion in the shoulder area allows the massage zone to be better matched to the user's body shape. The built-in sensor supports its correct positioning relative to the body, so the compression massage can comfortably cover the shoulder area too.

Safety, sound and style

The anti-pinch system uses 8 sensors placed on the chair body to monitor the space around moving parts. The housing and rear cover are made from flame-retardant materials, and the mechanism, PCB and iron frame were developed in cooperation with Body Friend. The HIFI audio system with subwoofer lets you listen to music during the massage, while the steel honeycomb mesh, sporty lines and piano lacquer finish emphasise the character of the design.
