Manufacturer: EXTRALINK

Referention number: DNXGKPNQGRMNHJ

Information:

The massage chair inspired by the zero-gravity position provides full comfort and a tailored fit thanks to angle adjustment and the telescopic footrest extension. It offers a comprehensive full-body massage: 16 air cushions, massage rollers for the back, neck, waist and buttocks, as well as foot massage and heated calf massage. Intuitive operation via a large touch screen with a Polish interface, a button in the armrest and AI voice control makes it easy to select settings. In addition, Bluetooth lets you listen to music, while sensors monitor heart rate, oxygen level and blood pressure. Blue lighting creates a relaxing atmosphere.

Full product description

Massage in zero gravity position

The chair has been equipped with a structure inspired by the zero-gravity position, which allows free adjustment of the recline angle and adaptation of the setting to individual preferences. The ergonomic shape of the chair envelops the whole body, supporting comfort during massage sessions. Control is carried out using a large touchscreen with a Polish-language interface and access to multiple operating modes.

Comprehensive full-body massage

A system of 16 air cushions distributed across different areas of the chair performs a full-body compression massage. Massage rollers are responsible for massaging the buttocks and kneading the neck, back and waist areas. The functions used allow the massage action to be focused on selected parts of the body, adjusting the intensity to the user's needs.

Relaxation for legs and feet

The chair offers foot massage using special rollers and a heated calf massage, which increases comfort while resting. The telescopic extension of the leg section allows the length of the support to be adjusted, so the design can be adapted to users of different body shapes.

Intuitive function control

The chair is operated via a touchscreen and a quick-access button located in the armrest. The AI voice control function allows convenient selection of settings without the need to operate the panel manually. The built-in Bluetooth module allows music playback while enjoying the massage.

Intelligent control functions

The chair has been equipped with functions for monitoring basic body parameters. Sensors enable measurement of heart rate, blood oxygen level and blood pressure, allowing the indicated values to be monitored during use. The side elements of the armrests feature blue "breathing light" illumination, creating a pleasant atmosphere during relaxation.

Set contents

The set includes a massage chair, a power cable and an instruction manual. The set contains all the elements needed to start using the device after preparing the chair's working area and connecting the power supply.
