Information:

LOVRO Blush Stick is a creamy cheek blush in a convenient stick that gives the complexion a fresh, natural flush. The universal shade suits different beauty types and works well for both everyday wear and special occasions. The soft formula spreads easily, blends into the skin and allows you to build the colour intensity from a subtle touch to a more defined effect. The handy 5 g packaging makes application and quick touch-ups during the day easy.

Full product description

Blush that brings the complexion to life

LOVRO Blush Stick is a creamy blush stick for the cheeks that helps give the complexion a fresh, naturally looking flush. Its versatile shade suits different beauty types. The colour can be a subtle addition to everyday make-up or a more striking accent for special occasions.

Creamy formula

The soft, creamy texture makes the blush easy to apply to the cheeks and blend with the rest of your make-up. The formula melts into the complexion, helping to achieve a natural finish without the feel of a heavy layer. The edges of the colour can be gently blended with your fingers, a sponge or a suitable brush.

Make-up in moments

The stick format allows for quick application of the product to the areas you want to emphasise. The blush can be applied directly to the skin and then blended using your chosen method. This makes make-up application easier both at home and when making quick touch-ups away from home.

Convenient stick format

The compact packaging takes up little space in your make-up bag, so the product can be conveniently taken to work, school or on a trip. The closing design protects the contents during storage, while the retractable stick helps control the amount of product applied. The product weighs 5 g.

Easy application

LOVRO Blush Stick can be applied directly to the cheeks, placing a small amount of colour on the selected areas. Then simply blend the product to gently merge it with your make-up. The creamy consistency helps refine the effect without the need for complicated application techniques.

Intensity under control

The formula allows you to build the colour intensity – from a light touch to a more defined flush. Application can start with a small amount of product, then another layer can be added. This lets you tailor the effect to the occasion, the rest of your cosmetics and your individual preferences.
