Information:

Momcozy SO016 Compression Socks for Women Wide Calf is a set of two pairs of compression socks for women, designed for pregnancy, the postnatal period and everyday leg support. The graduated 15-20 mmHg compression helps reduce feelings of heaviness, fatigue and discomfort during long periods of sitting, standing, working or travelling. The Wide Calf model offers more room in the calf, making it better suited to a wider leg circumference. The soft, breathable construction ensures comfortable wear, and the Light Gray/Pink colourway is suitable for everyday use.

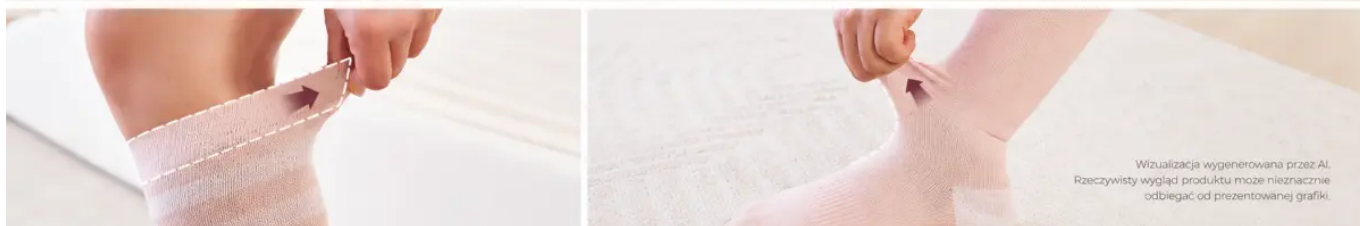

Full product description

Momcozy Compression Knee-High Socks

Momcozy SO016 Compression Socks for Women Wide Calf are compression knee-high socks designed for women seeking comfortable leg support during pregnancy and in the postpartum period. The Wide Calf design has been adapted for a wider calf, making it possible to choose these knee-high socks even when standard models are too tight. The Light Gray/Pink variant combines light grey and pink colours in a set intended for everyday use.

Miękkie i delikatne dopasowanie

Nie uciska,
nie zsuwa się,
nie pozostawia
czerwonych śladów.

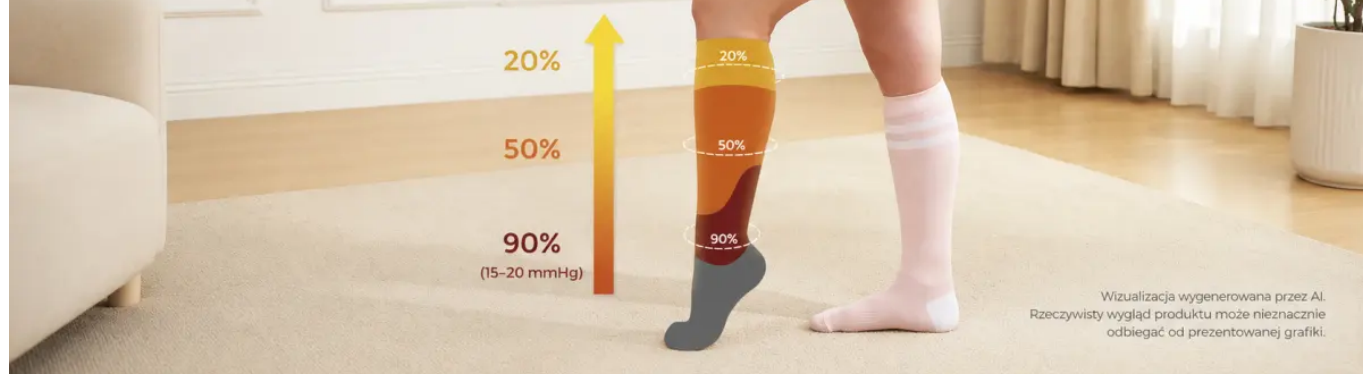

Graduated compression 15-20 mmHg

The knee-high socks use graduated compression at a level of 15-20 mmHg. The manufacturer classifies this level of compression as a gentler option for everyday use, including during pregnancy, at work and while travelling. Properly fitted knee-high socks can support the legs when the feet, ankles or calves become tired or noticeably heavy after prolonged sitting or standing.

Stopniowana kompresja dla zdrowszych nóg

Ukierunkowany ucisk tam,
gdzie najbardziej go potrzebujesz.

Support during everyday activities

The S0016 model can be used during various everyday activities. The knee-high socks are suitable both for work requiring long periods of sitting or standing, and for commuting or travelling. The manufacturer also indicates them as a solution intended for use during pregnancy and in the postpartum period. The correct size should be chosen primarily on the basis of calf circumference and the current size chart.

Soft and breathable construction

The manufacturer describes the knee-high socks as soft and breathable, which helps maintain comfort during longer wear. The fitted construction wraps around the foot and calf and helps keep the material in the proper position. The knee-length cut allows compression to cover the lower part of the leg, and the Wide Calf variant offers more room in the calf area than models intended for a standard leg circumference.

**Świeżość i suchość.
Delikatne dla skóry.**

35,2% Wiskoza	13,4% Elastan	51,4% Nylon

Easier to put on

Compression knee-high socks are best put on gradually, starting by correctly positioning the foot and heel section, and then rolling the material up along the calf. The manufacturer recommends smoothing the material so that it does not form bends or folds. In the case of compression knee-high socks, proper fit is important for comfort, so before choosing a size, measure the calf circumference at its widest point.

The product is an option for:

Momcozy SO016 Compression Socks for Women Wide Calf in a set of two pairs in Light Gray/Pink are an option intended for everyday leg support.

- pregnant women looking for knee-high socks with 15–20 mmHg compression,
- women with a wider calf circumference for whom standard knee-high socks are too tight,
- people who spend a lot of time sitting or standing,
- women looking for leg support during work and daily chores,
- people travelling by car, train or plane,
- women who want to use compression knee-high socks also in the postpartum period, in line with individual recommendations regarding the use of compression.
