Information:

Stay Beauty X26 UV LED is a lamp for curing hybrid varnishes, gels and other light-curing products in LED+UV technology. 380 W power ensures fast and effective curing of successive manicure layers, while the spacious interior and ergonomic shape make it easy to position the hand comfortably. The device runs on 230 V mains power, so it does not require charging and will work well both at home and in a beauty salon. Thanks to its universal technology, it is suitable for hybrid and gel styling.

Full product description

Nail styling

Stay Beauty X26 UV LED is a lamp designed for curing hybrid varnishes, gels and other light-curing products compatible with LED+UV technology. It enables the successive stages of a manicure to be carried out at home or in a beauty salon.

380 W power

The 380 W power supports efficient curing of individual layers of nail styling. The exposure time should be adjusted to the type of base, varnish, gel or top coat used, in accordance with the product manufacturer's recommendations.

LED+UV technology

The combination of LED and UV light sources allows the lamp to be used with various light-curing products intended for this type of device. The X26 model can be used for hybrid and gel styling.

Comfortable work

The shape of the housing and the spacious interior make it easier to position the hand during manicure curing. The design helps direct the light onto the nails, improving work with successive layers of the products used.

Mains power supply

The lamp uses 230 V mains power, so it does not require battery charging. Once connected to a power source, it can be used during multi-stage manicures and regular work at a beauty station.

For home and salon

Stay Beauty X26 will work well as equipment for a home nail styling corner as well as a station in a beauty salon. The light-coloured housing suits spaces intended for care, and the device's form makes it easier to prepare an organised manicure area.
