Hisense

Manufacturer: HISENSE

Referention number: DNXGGMHNERMLPH

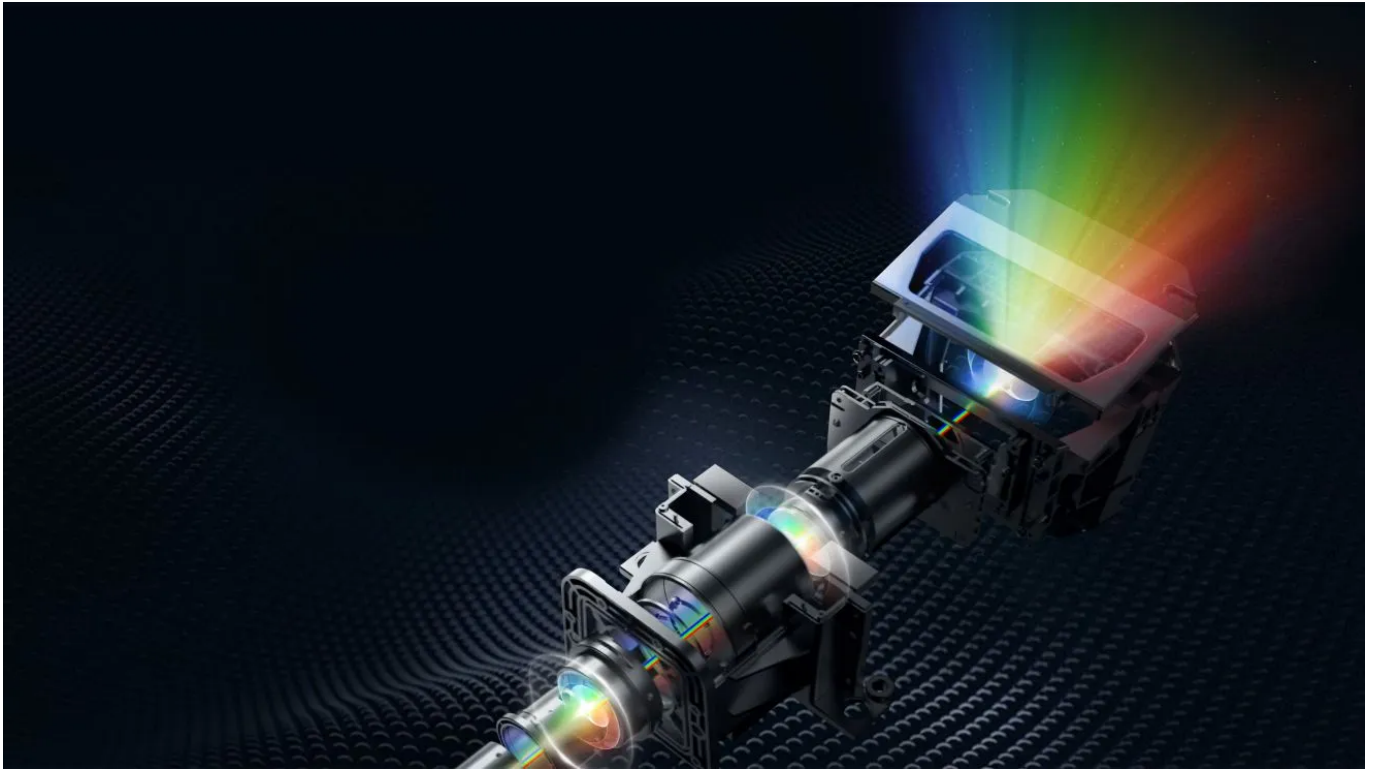

Product features

Colour gamut	107 %
Package weight	15000 g
Power consumption (typical)	350 W
Power consumption (standby)	0.5 W
Package depth	316 mm
Package height	507 mm
Package width	711 mm
AC input voltage	120 V
RMS rated power	30 W

Full product description

A true cinematic feast

Premium X-Fusion™ laser light technology offers an extensive color palette that creates images similar to those that human eyes actually observe in the surrounding world.

An image full of color and detail you've never experienced before

Having as much as 107% color palette coverage, the BT2020 is a guarantee of extraordinary color richness. By using three lasers - red, green and blue, the projector achieves a range of colors that is beyond the reach of standard TVs. Now you can really see the intense green of the grass on the field during games, feel the fear associated with bloody reds in horror movies, and marvel at the deep blue of the ocean in documentaries. It's a color experience that's never been available on your home screen before, making every detail of a movie take on incredible realism.

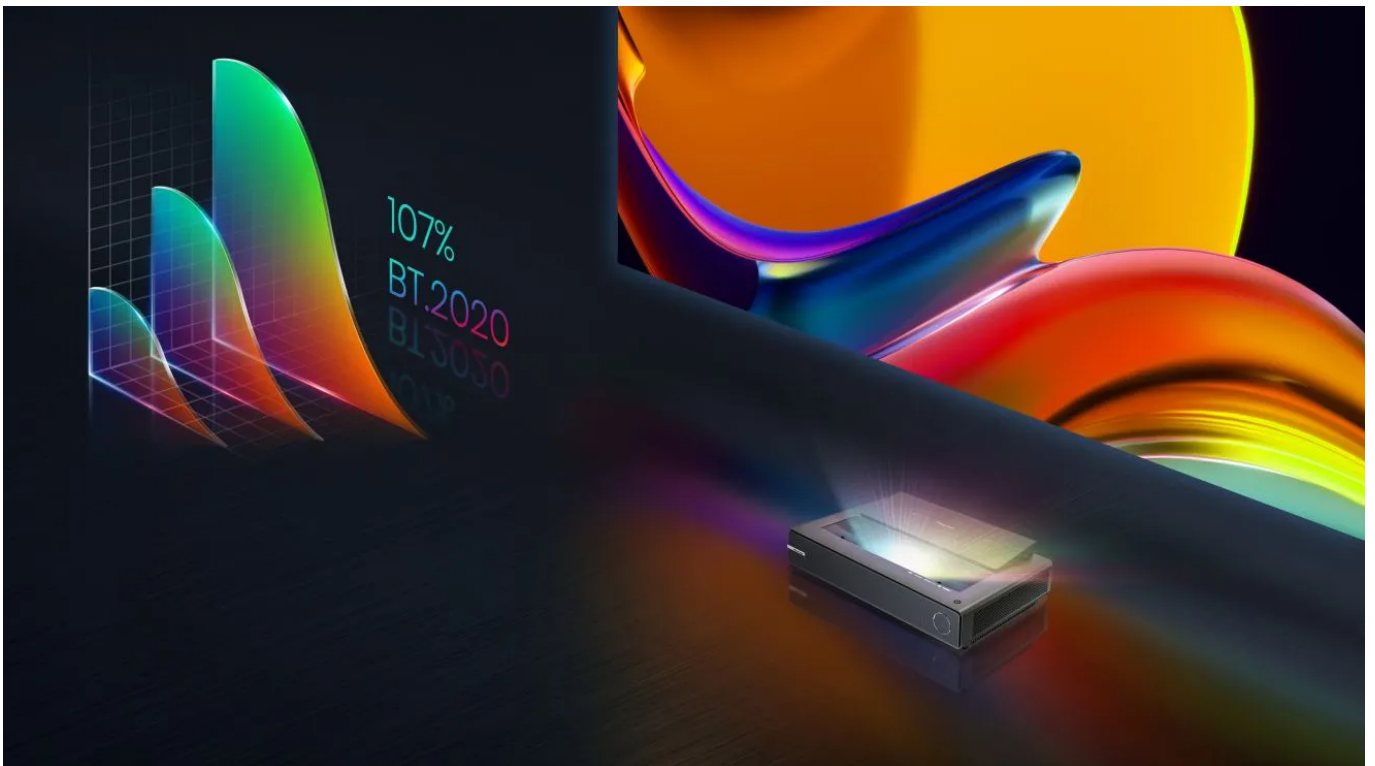

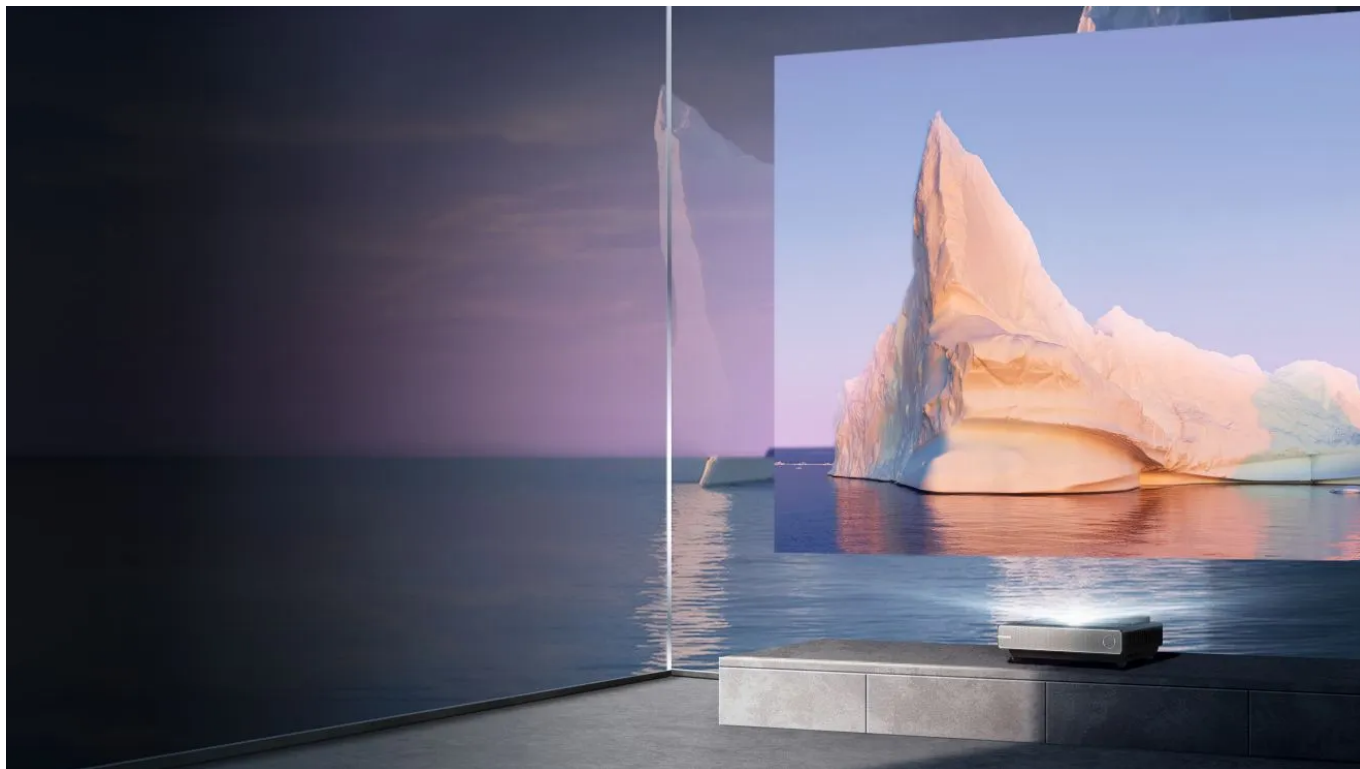

Image diagonal from 90 to even 130 inches

The new Laser Cinema Series from Hisense provides an unparalleled giant screen experience. The PX-1 Pro projector with ultra-short-throw technology can project images from 90 inches to as much as 130 inches, while being placed just inches from the wall. Thus, you are free to adapt it to your projection screen or wall and enjoy a giant-sized cinema in your home or office.

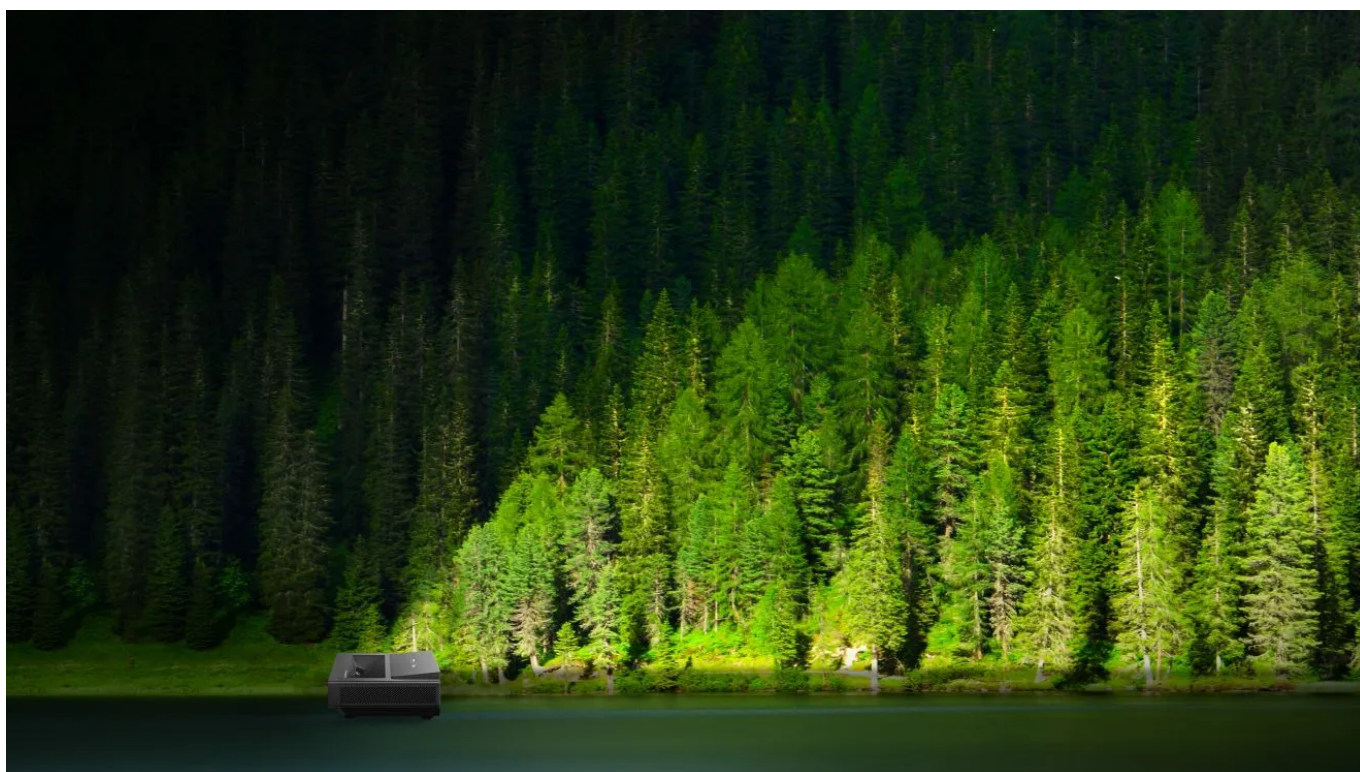

Bright image in all conditions

With an impressive brightness of up to 2,200 lumens, the image projected by the new Hisense Laser Cinema projector maintains its clarity and intensity regardless of the lighting conditions, whether during a bright day or evening. As you discover the capabilities of this device, you can easily experience the fascination of a large cinema screen in the comfort of your own home.

Dolby Vision, HDR10 and HLG

With support for Dolby Vision, HDR10 and HLG, entertainment comes to life through extraordinary brightness, enhanced contrast and incredibly dynamic images.

Full 4K UHD support in HDR

With complete support for 4K resolution with HDR technology, you can explore movies, sports broadcasts and games on a huge screen in the highest picture quality. Discover every detail, see subtleties in dark scenes with HDR and experience authentic movie depth again.
