Full product description

Huawei Echolife HG8010H

The **Huawei HG8010 GPON** from **EchoLife Series** is a rugged optical network terminal designed to connect to FTTH networks as a basic multifunctional home or office gateway. The **HG8010** is equipped with one adaptive **Gigabit/Fast Ethernet** port with auto-negotiation for uninterrupted simultaneous Internet access, seamless VoIP services and HD video streaming.

Plug-and-play technology

Support for **plug-and-play** technology greatly speeds up the installation of new equipment and guarantees the stability of the fiber modem. **Connection to the Internet, IPTV and VoIP** does not require any initial configuration or special knowledge on the part of the user. All provider services can be accessed with a single click in the network management system (NMS).

Modern technology

Implementation of state-of-the-art energy-saving technologies and "green" assembly provides **25%** energy savings: the SOC's are integrated directly into the voice and PON transmission modules. Implementation of the **802.1ag Ethernet OAM** protocol enables real-time monitoring of E2E (exchange-to-exchange) channels.
