Full product description

Huawei ETP4830-A1 power supply with SMU01C module

It is a telecommunication power system, used for safe and uninterrupted power supply of other electrical devices in case of mains power failure. **Huawei ETP4830-A1** has a built-in AC/DC power supply system, thanks to which it achieves high energy efficiency. The power system has a built-in **SMU01C** module, which allows for intelligent management and a wide range of AC output voltage. The device is designed for installation in a **19"** racks or cabinets.

SMU01C module

The power system has a built-in SMU01C module, which allows **monitoring and management of the power supply system**. The module has a built-in LCD screen, which is equipped with a unit for human-machine interaction. The system is designed to meet high reliability requirements.

Huawei ETP4830-A1 features:

- Wide input voltage range 85 - 300 V AC.
- Wide temperature range of the rectifier from -40°C to 75°C.
- Hot-swappable.
- Standard construction design, 19/21 inch installation adjustment.
- Compact design (only 1U height) to save space for the user.
- Intelligent battery management to extend battery life.
