Full product description

Reliable GPON Client Terminal: Huawei EchoLife HG8012H.

The **Huawei EchoLife HG8012H** is an advanced **GPON OLT** client terminal designed for superior performance and reliability. Equipped with a **GPON** port and a gigabit Ethernet port, it can transmit data at NAT speeds of up to **900 Mbps**. This makes the device ideal for demanding FTTH network environments where high throughput is crucial.

Management and Remote Configuration

The EchoLife HG8012H features remote management from OLT and OMCI support, making monitoring and configuration of the device much easier. **Remote management** allows for flexible and rapid response to network needs, minimizing downtime and optimizing operational efficiency.

Quality of Service (QoS) and Security

The device supports Quality of Service (QoS) with **802.p** or VLAN ID-based prioritization to ensure stable and fast connections. **MAC** address-based filtering capability and **IPv6** support enhance security, protecting the network from unauthorized access.

Optimal Solution for CATV Networks

The **Huawei EchoLife HG8012H** is also an ideal solution for **CATV-enabled** networks. With a built-in CATV port, the device enables the integration of TV and Internet services, providing versatility and space savings.
