Full product description

EchoLife HG8110H is an indoor optical network terminal

EchoLife HG8110H is a **GPON ONT** terminal for indoor use. Thanks to the use of GPON technology, we have access to **ultra-broadband** connections for individual users or small businesses.

ONT series EchoLife HG has POTS ports and automatic FE/GE Ethernet negotiation ports, which allows for high transmission efficiency.

HG8110H has powerful streaming features to provide an excellent VoIP, Internet and high-definition video experience. It has a **gigabit Ethernet port and a POTS RJ11** port as a telephone port.

It offers high performance and adequate bandwidth control. It is a good solution for users who need high bandwidth internet.

Main features of HG8110H

- 1 GPON (SC/APC) port B+
- 1 Ethernet 10/100/1000Mb port (RJ45)
- 1 POTS port (RJ11)
- High transfer efficiency

Functions

- Plug-and-play: configurations are automatically provided by the network management system - on-site maintenance is not required
- Remote Diagnosis: the POTS port supports loop line tests and call simulation tests, implementing remote error detection
- Support for remote updates
- Link monitoring: based on IEEE 802.1ag Ethernet OAM implements End-to-End (E2E) link detection and network isolation
- Energy-efficient: SOCs integrate PON, voice, gate and LSW modules, saving up to 25% energy
