Full product description

JIROUS JRC-29 DUPLEX PRECISION N/FEMALE

The double polarized **JRC-29 Duplex Precision** parabolic antenna is designed for directional connections with **full-duplex** mode or **MIMO** duplex mode in the **5 GHz** frequency band with high isolation level. The antenna is designed to work over long distances. Its design with a deep **plate increases the isolation between the** antennas on the mast and increases the front to back signal ratio. The Precision version includes a massive **JDMW-900** handle developed for microwave links.

Compatibility and installation

The **Jirous** product can be used in combination with an external **JR - 350 Alu** metal box for AP, RouterBOARDS and other electronics. JRC-29 DUPLEX PRECISION has separate snap-on nuts for easy mounting and adjustment of azimuth and height. **Right and left side mounting** is possible. The Jirous antenna is supplied with **JDMW-900** holder (packed separately), which enables easy mounting on a mast. The bracket can be installed separately on a mast, then you can simply hang the antenna with a microwave unit. The bracket allows precise adjustment in both directions. In places where strong winds are expected to occur **it is recommended to mount on a mast with a minimum diameter of 50 mm.**
