Full product description

Parabolic antenna JRC-29DD DupLEX

The double polarized **Jirous JRC-29DD DupLEX** parabolic antenna is designed for directional connections in the **full-duplex** mode or **MIMO** in the **5 GHz** frequency band with high isolation level. The antenna is designed to work over long and medium distances in difficult conditions.

Innovation JIROUS JRC-29DD DUPLEX

Its construction with a deep plate **increases the isolation** between the antennas on the mast, which translates into **increased proportions between front and back**. Other models :

JRC-29DD-SX Duplex - antenna with stainless steel holder in case of adverse corrosion conditions.

JRC-29DDD Duplex Precision - antenna with precision holder JDMW-900 AR

Compatibility and fastening

The antenna can be used in combination with external metal box **JR - 350 Alu** for AP, **RouterBOARD** and other electronic devices. The antenna is equipped with **secondary snap-on nuts** for easy mounting and adjustment of azimuth and height. Right and left side mounting is possible.

When used with GentleBOX JR-300 we recommend:

- in version with R-SMA connectors (JRC - 24DupLEX - SMA)
- When using the version with N-connectors, it is necessary to use an angle adapter for horizontal polarized connectors
- Pigtail R-SMA/MMCX
- Pigtail R-SMA/UF.L
