Full product description

Parabolic antenna JRC-29DD-SX MIMO

Dual polarized parabolic **Jirous JRC-29 Deep Dish MIMO** antenna is designed for directional connections with MIMO mode in **5 GHz** frequency band. The antenna is designed to work in environments with multiple reflections for long and medium distances in difficult conditions.

Innovation JRC-29DD-SX MIMO

The deep antenna design increases isolation between the antennas on the mast and increases the front to back signal ratio. The new concept expands the frequency band. Other models

:JRC-29DD-SX MIMO Precision - antenna with precision grip JDMW-900

ARJRC-29D-SX

MIMO - antenna with stainless steel grip for operation in adverse corrosive conditions.

Compatibility and fastening

The JIROUS JRC-29DD-SX MIMO antenna can be used in combination with an external metal box JR - 250 Alu for AP, RouterBOARD and other electronic devices or with a **GentleCLIP** holder for easy installation of clip-on devices. The antenna has separate snap-on nuts for easy mounting and adjustment of azimuth and height. **Can be mounted on the right and left side.**
