Full product description

JIROUS JRC-32 DUPLEX PRECISION N/FEMALE

The **JRC-32 Duplex Precision** double polarized parabolic antenna is designed for directional connections with **full-duplex** or **MIMO** duplex mode in the high isolation **5 GHz** frequency band. The antenna is designed to work over long distances. Its deep dish design **increases isolation between the antennas** on the mast and increases the front to back signal ratio. Precision version includes a massive **JDMW-900** mount developed for microwave links.

Compatibility and installation

The **Jirous** product can be used in combination with an external **JR - 350 Alu** for AP, RouterBOARDS and other electronics. JRC-32 DUPLEX PRECISION has separate snap-on nuts for easy mounting and adjustment of azimuth and height. **Right and left side mounting is possible.** The Jirous antenna is supplied with **JDMW-900** bracket (packed separately), which enables easy mounting on a mast. The bracket can be installed separately on a mast, then you can simply hang the antenna with a microwave unit in it. The bracket allows precise adjustment in both directions. In areas where strong winds are expected to occur, it is recommended to **mount on a mast with a minimum diameter of 50 mm.**
