Full product description

JRC-32 Deep Dish DupLEX

The **JRC-32 Deep Dish DupLEX Precisiondual-polarized parabolic antenna** is designed for directional links with full duplex mode or MIMO duplex mode in **5 GHz frequency band** with high isolation level.

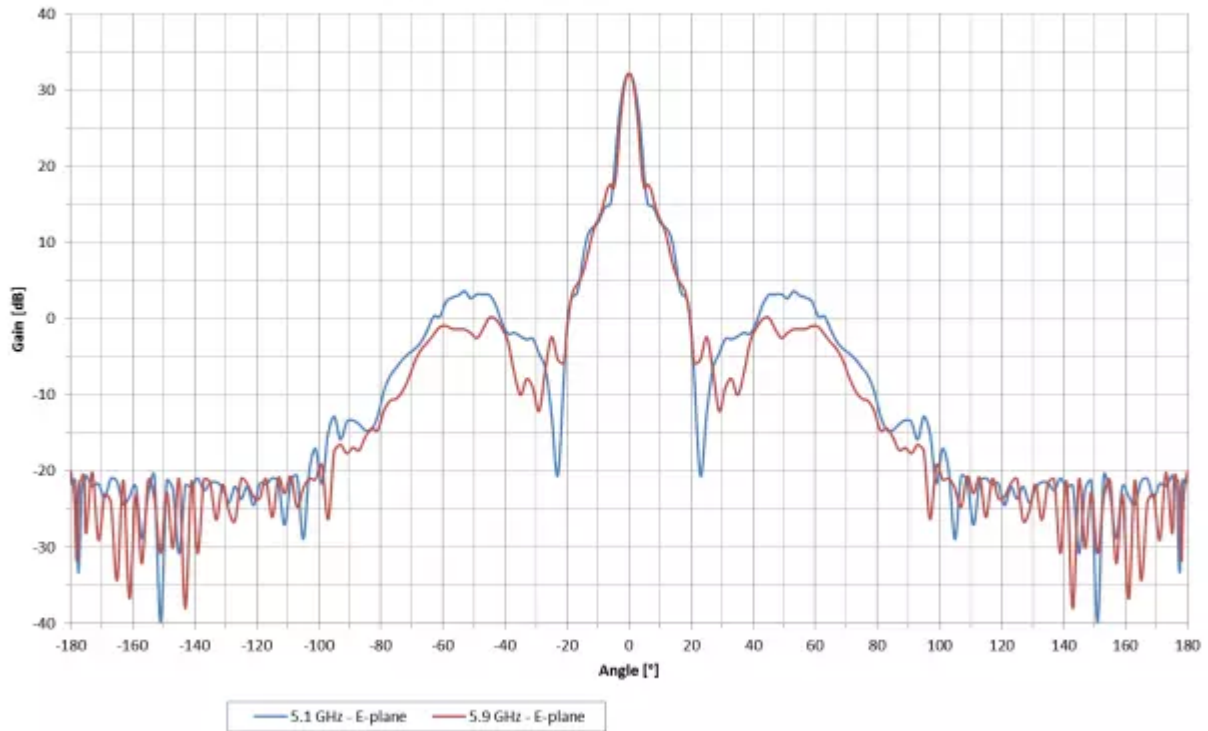

Distances are no barrier

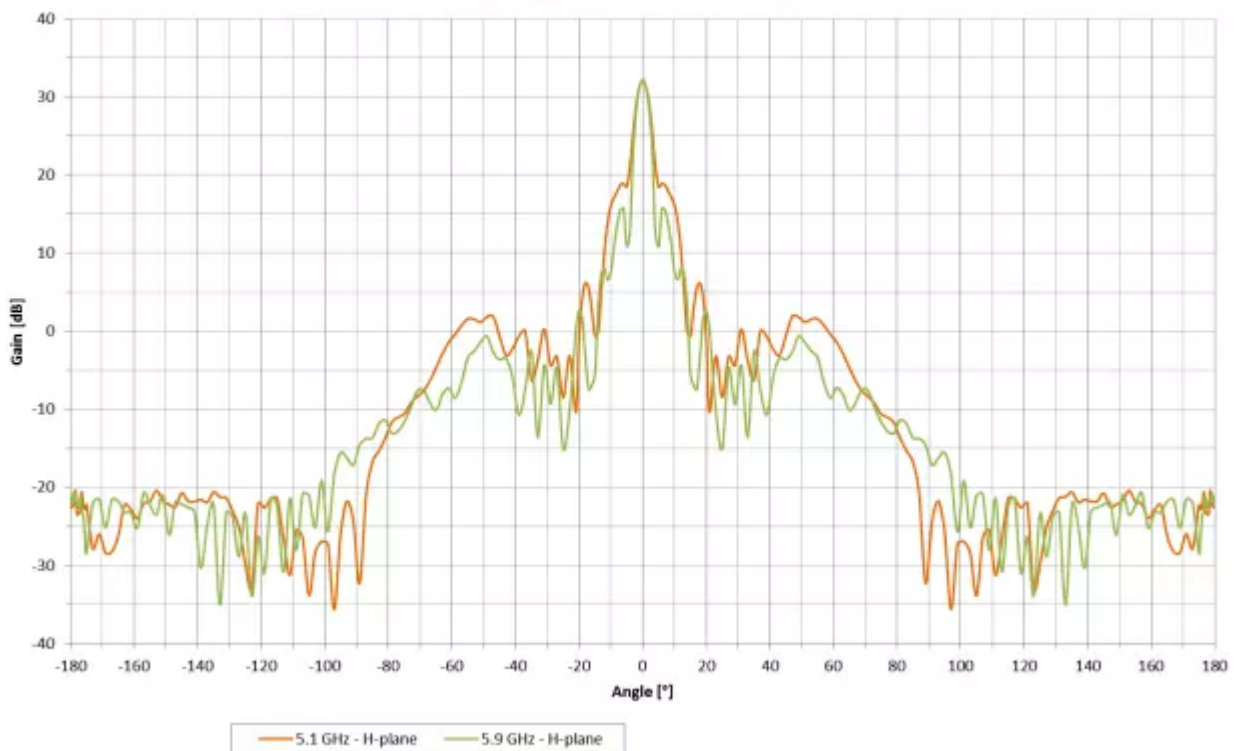

The antenna is designed for **long distance** operation. Its deep dish design increases isolation between antennas on a mast and increases the front-to-back ratio. The Precision version includes the massive JDMW-900 mount developed for **microwave links**.

Radiation measurement

JRC-32DD Duplex Precision - E-plane

JRC-32DD Duplex Precision - H-plane

Application of antenna from Jirous

The antenna can be used in conjunction with the **JR-350 Alu metal outdoor box for APs, RouterBOARDS and other electronics**. The unit has separate snap nuts for easy mounting and adjustment of azimuth and elevation. Both right and left side mounting is possible. The antenna is supplied with a bracket (packaged separately) for easy mast mounting. The bracket can be installed on a mast separately. The bracket allows precise adjustment in both directions. In areas where strong winds are expected, mounting on a mast with a minimum diameter of 50 mm is recommended.
