Full product description

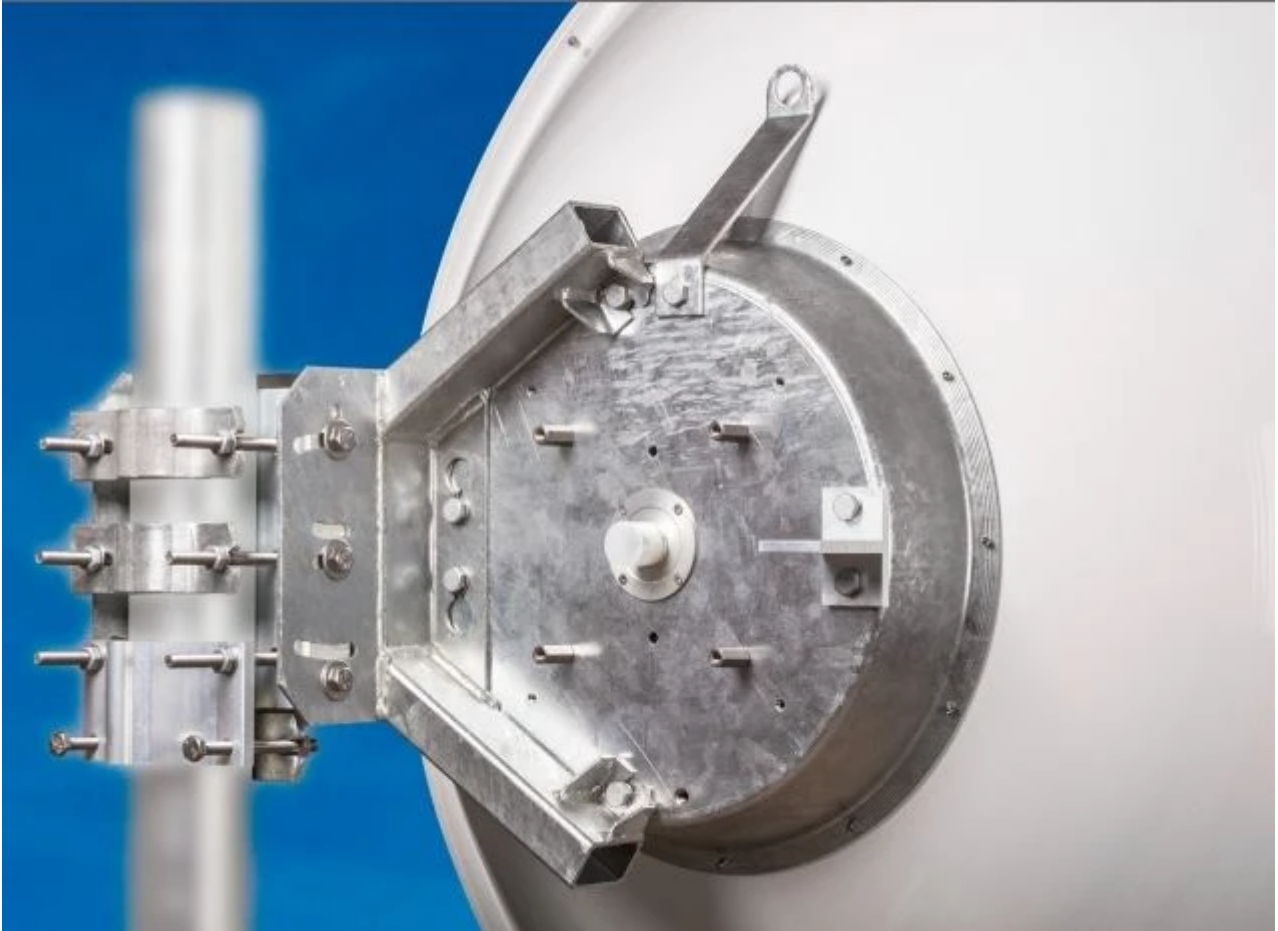

JIROUS JRMB-1200-10/11Ra - Parabolic antenna

The **JRMB-1200-10/11Ra** antenna is designed for microwave links in the **10 and 11 GHz** frequency bands. Precise work with a dish is in accordance with ETSI EN 302-217-4-2 class 2.

Easy installation of the JIROUS antenna JRMB-1200-10/11

The antenna is supplied with a massive bracket for **easy mounting** on the mast. The bracket can be mounted separately on a mast. Then you can simply hang the antenna with the microwave unit in it. The antenna bracket allows **precise height adjustment** $\pm 15^\circ$ and azimuth adjustment $\pm 7^\circ$. Right and left side mounting is possible. For installation in adverse weather conditions we recommend a set of wind braces. For installation on a mast with a diameter of 60 to 80 mm an adjustable set of wind braces should be used.

Main features:

- Strong wind stability
- Right and left hand assembly
- Solid support with exact height and azimuth adjustment
- High insulation of adjacent connections
- High interference immunity and high mechanical strength
