Full product description

JIRIOUS JRM-900-10/11

Directional parabolic antenna **JRM-900-10/11**, created by Jirous company, has been adapted to work in **10 and 11 GHz band**. With JRM 900 you can set up a very efficient **point-to-point connection**. The device is characterized by a narrow main beam, having a width of about 3°, which allows to avoid many interferences, caused by other transmissions. The time frame for long distance connection has **a width of 900 mm and gain of 37 dBi**.

EASY AND QUICK INSTALLATION

It has an antenna with a deep reflector and a massive handle. The antenna is supplied with a bracket for **easy mounting on a pole**. The bracket can be installed separately, then you can simply hang the antenna with a microwave unit in it. The bracket allows precise adjustment in both directions. **Mounting on the right and left side is possible**.

Key features of JRM 680

- professional microwave antenna
- deep parabola with high interference resistance and high mechanical strength
- high insulation of adjacent connections
- kit radio
- solid bracket JDMW-900 with exact height and azimuth setting.
- right and left hand assembly
- extreme wind stability
