Full product description

Mercusys Halo S3 WI-FI Mesh

Halo S3 from **Mercusys** is part of the increasingly popular **Wi-Fi Mesh** system. It is an ideal solution when you want to cover the entire family house or company building. The Mesh Wi-Fi system will prove useful in places where we can observe **lack of coverage**.

Wi-Fi dla Twojego domu

Domowy system Wi-Fi Mesh 300Mb/s

Halo S3

Reliable, modern solution

The mesh system is a very modern, reliable and convenient solution, which allows for trouble-free use of the Internet throughout the home network. The advantages of Wi-Fi Mesh system:

- **Better coverage at home or in the company** - a great advantage of devices working in a wifi mesh system is that they can be placed in virtually any place in our home.
- **Lossless signal transmission** - individual nodes of the mesh system communicate both with the main router and with each other.
- **Stable operation** - the advantage of Wi-Fi Mesh is stability. There is constant communication between the nodes and the router. Thanks to this, if one element fails, the wireless network will continue to work properly.
- **Plug & Play** Installation - just take it out of the box, the devices are ready to use.

More devices, more entertainment

Halo S3 is able to provide **a permanent connection to more than 40 devices at the same time**. This way you can connect computers, phones, IP cameras, consoles and other Smart Home devices and **take advantage of their peak performance**. No signal is possible with Halo S3 devices, because **the devices in the house always connect to the unit with the strongest signal and highest performance**.
