Full product description

Keep your in-car devices safe

The Mikrotik APA-1 car power adapter is a reliable solution that protects your devices from harmful power surges and other dangers that can occur in the car. Whether you're using a Mikrotik LtAP device or other equipment, this adapter will provide the necessary protection, giving you peace of mind and confidence.

Advanced surge protection

Mikrotik APA-1 is equipped with surge protection, which protects devices from damage caused by sudden power surges. Using a gas tube, surge energy is quickly and effectively dissipated. The process is based on gas ionization, which creates a safe path for excess voltage and prevents damage to equipment.

Multi-layered protection for complete security

The device uses a solid-state surge suppressor (TVS), which further protects your devices from extreme voltage spikes. Combining this with active reverse polarity protection, the adapter operates safely even if the power supply is incorrectly connected. In addition, a built-in low-pass filter effectively blocks unwanted pulses, and a standard fuse provides an additional layer of protection.

Adjustable output voltage for flexibility of use

The Mikrotik APA-1 makes it easy to change the output voltage by adjusting the position of a jumper, allowing you to tailor the operation to suit

different needs. For more advanced applications, there is also a pass mode, in which the input voltage is not adjusted. This allows users to use the adapter flexibly, adapting its functionality to a specific device.

A cost-effective approach to equipment protection

Taking care of your equipment through proper security features is always more cost-effective than costly repairs or equipment replacement. Mikrotik APA-1 offers not only high quality, but also peace of mind, thanks to a comprehensive set of protective features. Choose reliability and assurance in all conditions.
