Full product description

MikroTik GPEN11

The MikroTik GPEN11 is a PoE injector equipped with 2 Gigabit Ethernet ports. GPEN11 is designed for use in the MikroTik GPEN network. It acts as a subscriber's box and at the same time enables to power an external switch which distributes the signal among subscribers. The device can also be used to power a wireless CPE on the roof. GPEN can also be safely fixed to a wall or a cabinet.

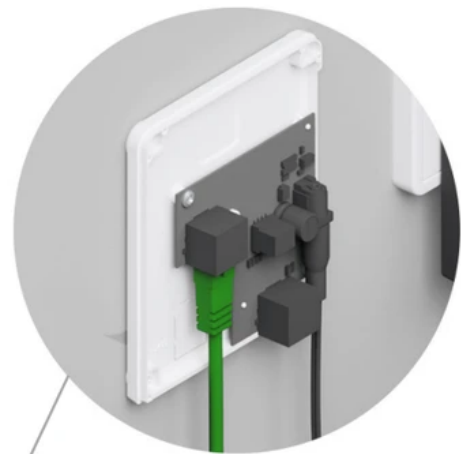

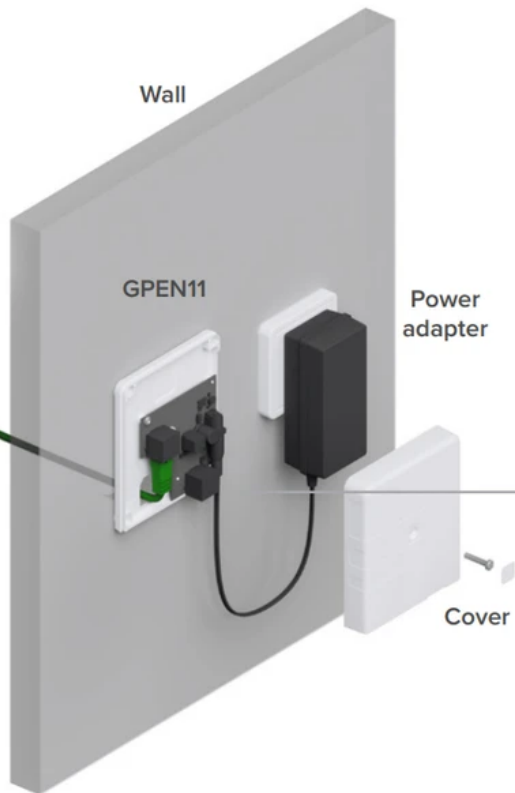

This device is designed to introduce cheaper and easier solutions

It has a casing adapted to wall mounting, on which there is space for the operator's ISP sticker (dimensions 6.6 x 2.54 cm). Supported voltage range is 12 - 57 V, no power supply included. GPEN11 is part of the GPEN (Gigabit Passive Ethernet Network) series, which aims to replace GPON installation with a cheaper and easier to implement Ethernet solution.

Ethernet cable to a switch / router
