Full product description

Mikro Tik LDF LTE6 kit - a modern device with reliable operation

The LDF LTE6 KIT from MikroTik is a reliable and durable radio, designed to be mounted on offset (satellite) antennas to amplify the signal. The 6th category device has an LTE category 6 modem, coordinated with 4G, 3G and 2G LTE. The device is equipped with a built-in antenna (8dB, beamwidth 66°).

Excellent performance in a modern device

MikroTik LTE6 kit is a device with significant throughput. For download it is up to 300 Mbps, and 50 Mbps for upload. It is suitable for remote locations within the range of a cellular network. The device should be connected to a satellite dish. Band aggregation function enables the device to use many bands simultaneously. What does it mean? In places where there are many receivers of LTE signal and in spaces where the range is poor, the device allows to increase the efficiency and quality of operation, which translates into better quality of reception.

Increase reception quality

The use of Mikro Tik LDF LTE66kit is associated with an increase in transmission range by up to 30 dB. This universal device with input voltage range of 10-28V DC is suitable for outdoor deployment. It is resistant to dust, moisture and humidity. Increase the signal strength and reception quality even where it seemed impossible until now. The device has compact dimensions and is easy to install and remove. The effectiveness of reception is guaranteed by correct installation, according to the instructions.
