Full product description

MikroTik nRAYG-60adpair

Wireless Wire nRAY ultra-compact **60 GHz** radio bridge eliminates frequency congestion by busy frequencies from Wi-Fi devices, providing overall wireless data transfer rates of over **2 Gbps** without sacrificing network speed. Used in a special set of 2 paired devices, it organizes secure encryption through AES, with a range of over **1500 meters**. All you need to do is point the **Wireless Wire nRAY** to each other and power the devices, they will connect automatically, operating on a **plug and play** basis.

Robust electric part and solid housing

Ruggedly built to withstand the harshest weather conditions, including snow, all in a scaled-down chassis equal to previous models, snow storms are no longer a problem and the signal will still come through. The 88F3720's powerful **1 GHz dual-core processor** will provide the fastest packet transmission, almost as fast as twisted pair. Field tests as a PtMP base station have shown that the Wireless Wire nRAY as a client device achieves over **1 Gbps** in full duplex mode with a **link** range of **800 meters**.

Included are two paired **nRAY 60G** radio bridges with two power adapters and 2 gigabit PoE injectors, alignment kits and nRAY solidMOUNT mounts specialized for this model from mettalic mounts.

Main features

- Set of two devices that are fully operational
- Wireless data transfer at a total speed of 2 Gbps
- Establishment of encrypted radio links with a range exceeding 1.5 kilometres
- Integrated 60 GHz radio module
- Gigabit Ethernet port
- Dual-core processor with ARM architecture
- Ultra-compact, snow-resistant design
