mimosa

Manufacturer: MIMOSA

Referention number: DNXFENLSHRMMNO

Information:

Mimosa Gigabit Network Interface Device (NID) 100-00039 is an elegant and effective surge protection device designed for mounting on the exterior wall of a building. It provides the technician with convenient access to the installation without the need to enter the house, while at the same time protecting the Ethernet network against surges and serving as a grounding point. The foam cable entry and sealing closure increase protection against rain and dust, ensuring the reliability and durability of the installation.

Full product description

Mimosa Gigabit Network Interface Device (NID) (100-00039) is an elegant and effective surge protector. It is designed to be mounted on the outside of a building. This lightning arrester allows technicians to access without entering the house, while providing effective surge protection and grounding point for any installation requiring Ethernet cabling. For better protection against rain and dust, the NID has a foam cable entry and sealing closure.
