momcozy

Manufacturer: MOMCOZY

Referention number: DNXXGJOILLRMMNI

Information:

Momcozy ErgoWrap Belly Band is a functional black postnatal support band in size M, designed to support women after childbirth, including after a caesarean section. The ergonomic Ergonest design and 3D shaping help stabilise the spine, relieve the lower back and pelvis, and support the recovery of the rectus abdominis muscles. The breathable, soft and seamless material ensures wearing comfort, while the discreet black colour means the band does not show under clothing. The adjustable fastening allows the compression level to be tailored to the user's needs, supporting a safe and comfortable return to shape.

Full product description

Functional black postpartum belt Momcozy ErgoWrap Belly Band (M)

Postpartum abdominal belt by **Momcozy** is a practical item supporting a woman's figure during the demanding **postpartum period**. This product was created to stabilise the body and make it easier to perform **everyday activities** while natural **recovery** takes place. By choosing this **postpartum** model, the user receives a solution that allows her to **support** weakened abdominal tissues in a controlled and safe way. The black **belly wrap** is suitable for use under dark **clothing**, ensuring discretion and freedom of movement after the event that was **childbirth**.

Momcozy: Ergonest Technology and 3D construction

The structure of the **Momcozy ErgoWrap postpartum belt** is based on the advanced Ergonest Support Structure system, which **perfectly adapts** to the natural curves of the spine. This **Momcozy ErgoWrap belt** uses **3D** shaping, which **provides gentle** lifting of tissues in the **lower abdomen**. The **Momcozy ErgoWrap was designed** in such a way as to offer stability without unnecessary pressure that **causes pain**. Thanks to the use of **breathable material**, the skin remains dry, which is crucial for hygiene in the first **days after childbirth**.

Ergonomiczny, wyprofilowany krój

Krój w kształcie litery C

-  Wspomaga karmienie piersią
-  Pomaga zachować właściwe ułożenie narządów
-  Łatwy w regulacji

Relief for the lower back and pelvis after childbirth

Postpartum belts are meant to provide stable support for the spine, helping it regain balance and relieving it during the recovery period after pregnancy. **Momcozy** helps effectively **alleviate pain** in the **lower back** by transferring the load to the hip belt and the area known as the **pelvis**. Regular **wearing** of the belt helps maintain proper posture, which is useful during **breastfeeding** or carrying a newborn. The product **provides essential support**, acting like a stable **bandage** that protects the **deep muscles** from excessive strain.

Recovery of the rectus abdominis muscles and return to shape

The **compression** used in this model plays an important role when the goal is **recovery** of tissues and **muscle recovery**. The **abdominal belt** **provides** appropriate **pressure** that supports the closing of the **rectus abdominis muscles** after their physiological stretching. Such support speeds up the **return to shape** by stabilising the **abdominal muscles** without the feeling that the belt is **too tight**. Before starting to use **abdominal wraps**, **consult your doctor** to match the intensity of support to your health condition. Although the **maternity belt** **provides** support before delivery, the **ErgoWrap** model is intended exclusively for postnatal care.

Bezpieczeństwo i komfort po cesarskim cięciu: gojenie, przycinanie i kichanie

Wearing comfort and fit for every body shape

Momcozy offers a wide range of sizes, from Medium to XL, allowing for precise **fit** to every body type. The product is **made of soft, skin-friendly** material that minimises the risk of chafing. The **seamless** design means the belt is not visible under **clothing**, allowing it to be **worn** in social and professional situations. The whole item has been **designed with** the needs of mothers in mind, who are looking for **comfort** without giving up effective body support.
