Full product description

Universal inverter

The ORVALDI KS solar sine wave inverter is a versatile device that combines the functionality of an inverter with that of a UPS, solar inverter and DC charger. It operates according to the programmed function. Solar energy/battery/network - full microprocessor control ensures that the unit is powered by a pure sine wave at all times. Use the multi-function LCD display to read operating parameters and configure multiple predefined operating modes.

LCD display

The **Orvaldi KS1K Solar Sinus 1kVA/1kW** inverter has a control panel and display located on the front panel of the unit. The front panel consists of three indicators, four function keys, and a multi-function LCD display that allows you to read operating parameters or configure operating modes, as well as show the operating status and input/output parameters of the unit.

Main features
