Full product description

Overmax AD-05 breathalyzer: Test your driving ability easily and accurately

Overmax AD-05 breathalyzer represents simplicity, ease of use and accuracy. It is a device that allows you to quickly determine the alcohol content in the exhaled air. Thanks to it, every user can check before each trip whether he or she is in a condition to drive safely.

On guard for security

Overmax AD-05 Breathalyzer is an ideal device for sobriety tests, whether for drivers, employees or individual users - it will work in all circumstances! The period of free calibration of the breathalyzer is valid for 24 months from the date of purchase!

Accurate and fast measurement

High measurement accuracy (up to 0.07‰) and a wide measurement range (0.00 -2.00‰) mean that the device will not fail in situations requiring the most precise data. The AD-05 also offers a very fast response time - about 5 seconds, and is ready for use after about 5 seconds from startup. The breathalyzer signals if the breath alcohol limit is exceeded with a red glowing LED.

Electrochemical sensor

1. used in professional police breathalyzers
2. greater precision of measurement than in the case of breathalyzers with a solid-state sensor
3. longer sensor life
4. greater sufficiency of device calibration
5. greater resistance to external conditions and all kinds of interference with the measurement process (such as cigarette smoke)

Audio notifications

In addition to the information displayed on the screen, the device has an audible notification function when the test is over. Simply blow into the mouthpiece until you hear a beep, which communicates the end of data collection for analysis.

Best solutions

The Overmax AD-05 is equipped with a clear LCD display so that regardless of the time of day or lighting conditions, the test result can be read. In addition, the breathalyzer has a standby indicator and a low-battery notification function. The breathalyzer is powered by 2 AAA batteries.
