Full product description

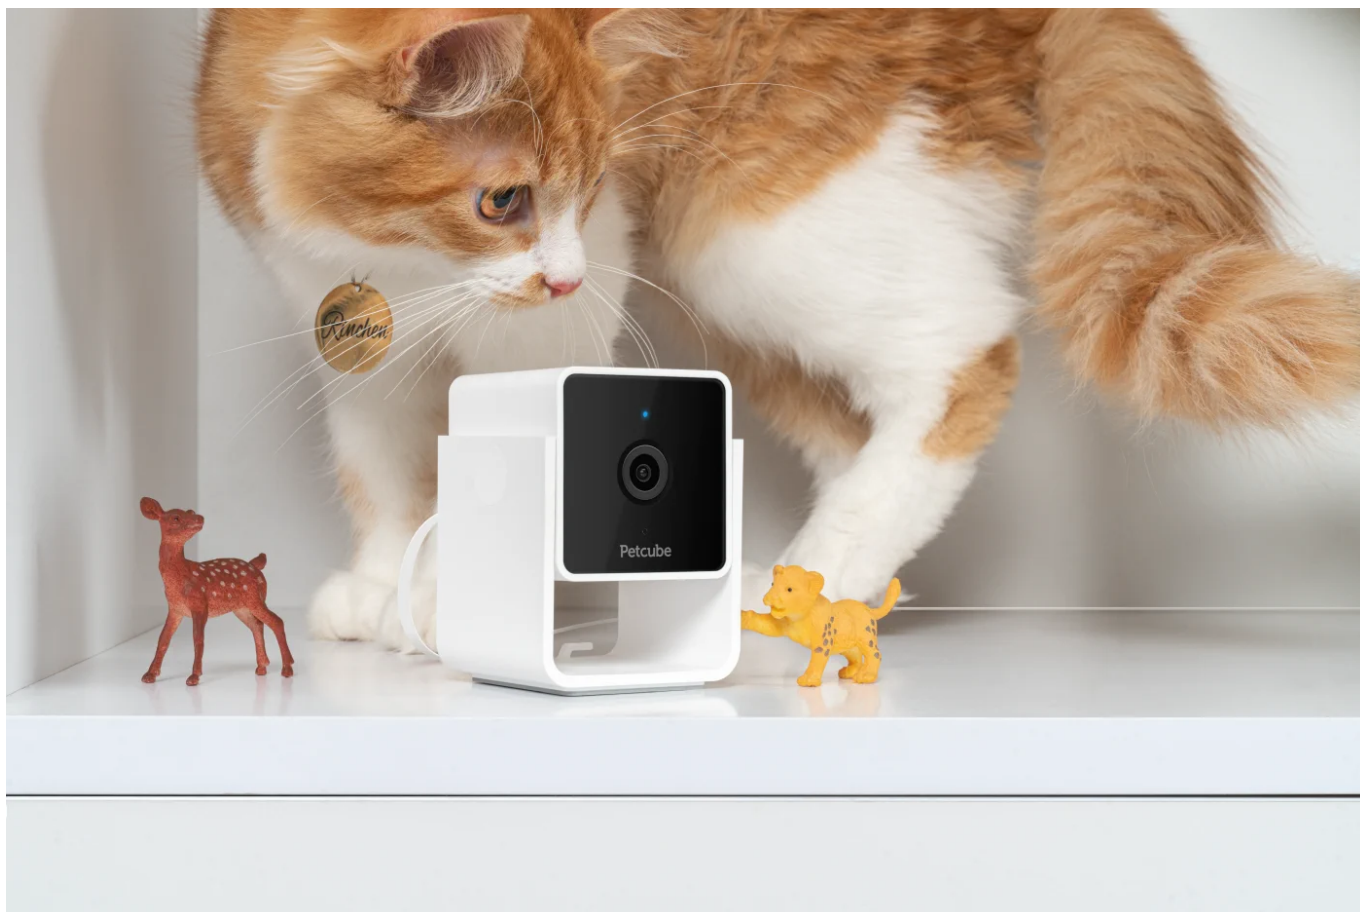

1080p HD Video and Improved Night Vision

The **Petcube Cam pet surveillance camera** offers **1080p full HD** live video transmission, providing clear and detailed images around the clock. With a **110° wide-angle lens** and **8x digital zoom**, you can watch your pet's every move from anywhere. The camera automatically switches to night mode when it gets dark, allowing **night visibility of up to 10 meters**. No matter the lighting conditions, you will always see a clear image of your pet.

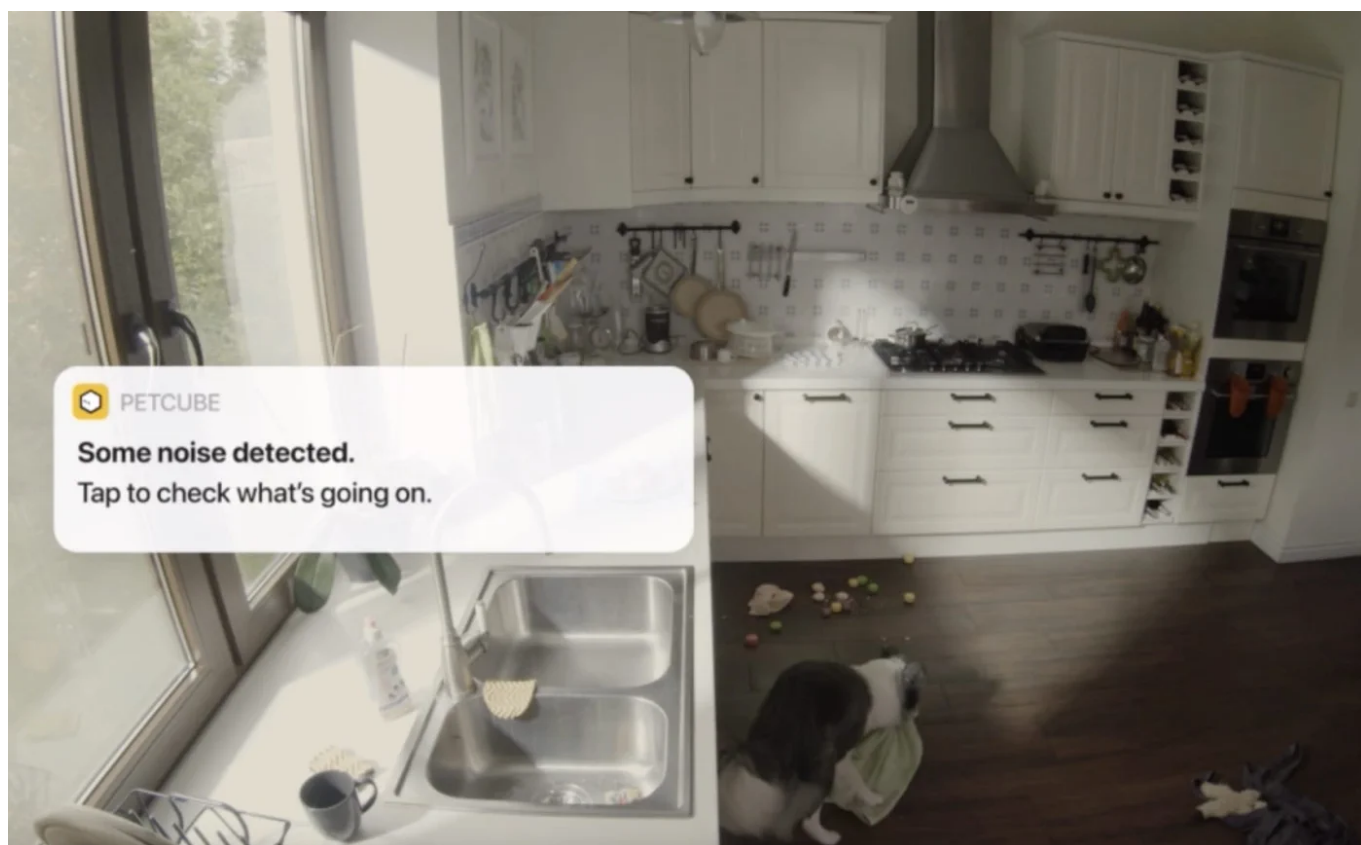

Two-way Audio with Crystal Quality

The Petcube Cam allows two-way communication with your pet, which means you can not only see **your pet**, but also hear and talk to it. The natural, realistic sound means your pet will recognize your voice, which will help it feel safer and less alone. You can also calm your pet or stop him from destructive behavior with voice commands.

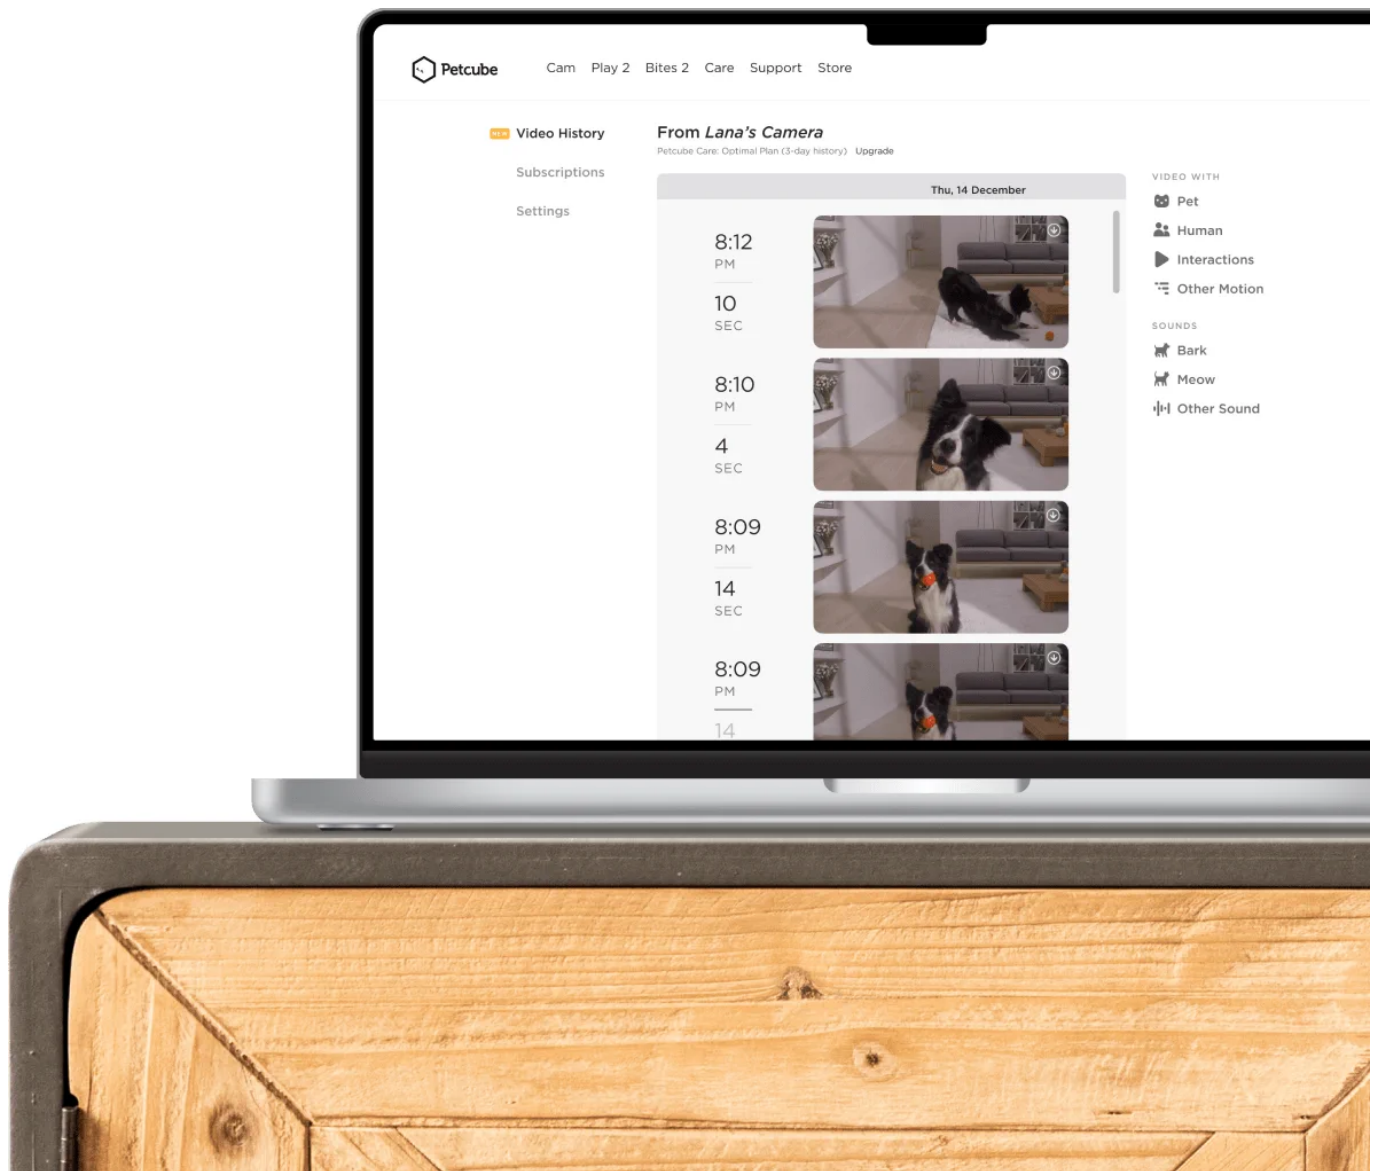

Smart Notifications in Real Time

With real-time notifications, the Petcube Cam keeps you informed of any activity in your home. The camera is equipped with **advanced sound and motion recognition technology** that is backed by **artificial intelligence**. With the optional Petcube Care subscription, you can receive notifications tailored to detect both people and pets, so you'll always know what's going on in your home.

Extensive Video History and Easy Downloading

Petcube Care offers the ability to record up to 90 days of activity on the camera, so you can keep your favorite memories with your pet. The subscription gives you access to smart alerts (barking, meowing, pet or human) and a web interface. You can enjoy these features during the free trial period.

Express Installation and Advanced Encryption

Installation of the Petcube Cam is extremely simple and fast - it takes just a minute. All you need to do is download the **Petcube app**, plug the camera into an outlet and connect it to a WiFi network (the camera only supports 2.4GHz networks). **Top-notch data encryption** ensures that your information remains confidential and secure.

Compatibility with Alexa voice assistant

Petcube Cam is compatible with Alexa, which allows you to control the camera by voice. With this feature, you can easily check what's going on in your home without moving from your seat. Check what your pet is doing whenever and wherever you are - never miss a moment or leave unseen areas again.

The Ideal Solution for Home Security

Petcube Cam isn't just a pet monitoring camera - it's also an excellent home surveillance system. With the ability to monitor your home around the clock, high-quality video transmission and smart notifications, you can be sure that your home and pets are always safe.
