Full product description

Power, reliability and continuity of operation

The **Powerlink** cordless screwdriver is designed for users who expect robustness and reliability in their daily work. **The 120 N.m of torque** provides exceptional power, ideal for drilling and screwing into a variety of materials. Thanks to **the impact function**, the tool can even handle concrete or masonry, offering versatility for home and workshop applications. **Battery power** guarantees full mobility and freedom of work - without restrictive cables. This is a power tool that combines power, functionality and convenience.

Two gears - full control and customization

Powerlink has equipped its cordless **drill** with a **two-speed (0-350 / 0-1850 RPM) speed control**, allowing you to fine-tune it to the type of work you need to do. The first gear is ideal for gentle screwdriving, while the second gear is ideal for high-speed drilling in harder materials. It's a solution that ensures efficiency and comfort, whatever the task. Switching between gears is smooth and intuitive, increasing the pace of work. **Thanks to the stable auxiliary handle**, even at higher torque the tool fits well in the hand and does not slip.

Impact function for demanding surfaces

With an **impact frequency of 21,600 strokes per minute**, Powerlink introduces a tool ready for the toughest challenges. **The 13 mm chuck** allows the use of a wide range of drill bits, increasing the versatility of the equipment. **The impact screwdriver** can handle not only wood and metal, but also building materials such as masonry and concrete. It's an excellent choice for do-it-yourselfers and professionals who expect more than standard solutions. **Combined with the side handle**, it provides maximum control even when there is a lot of resistance to the material.

Comfort of use at the highest level

The screwdriver comes with an **additional handle**, which provides better stability and safety during intensive use. The device is ergonomically designed to lie well in the hand and not cause fatigue even during prolonged use. The balanced design and compact size make it easy to maneuver and increase precision. This is a piece of equipment that not only works with power, but also **cares about user comfort**. **Powerlink cordless drills** are the perfect combination of convenience and functionality.

Kit ready for action

You get as many as **two** rechargeable **batteries**, which eliminates the risk of downtime - one charges, the other works. With **battery power**, you can work anywhere, even where there is no access to electricity. It's a complete and thoughtful solution for home, workshop and construction site use. **The Powerlink cordless screwdriver** isn't just about power and impact - it's about complete independence and freedom. **And with the included auxiliary handle**, you have a secure grip even when working overhead or in tight spaces.
