Full product description

5M automatic leash with LED side light - visibility and control in one

Evening walks can be fun, as long as you are sure that you and your dog are clearly visible. **PUPILPLANET 5M LED automatic leash with side light** enhances your safety with built-in lighting and sturdy construction. It's a practical accessory for those who value **functionality and protecting your pet in all conditions**.

Stable control and secure cable

The automatic cable unwinds and retracts smoothly, making it easy to walk in both open and urban areas. The mechanism responds quickly, and the locking mechanism allows you to stop your dog at the right moment. This gives you more control and less stress. **The leash cable** is resistant to abrasion, does not get tangled and remains springy. This gives you **a real impact on your dog's safety**, regardless of the environment.

LED side light - better protection after dark

The built-in **LED side light** improves visibility on the road, increasing your **protection in the evenings and at night**. It emits light to the side, making you visible from the profile as well, not just from the front. **The side illumination works on the principle of a soft glow**, which does not dazzle, but effectively attracts the attention of drivers and passers-by. This is especially useful on unlit sidewalks and paths.

5 m

Comfortable handle - comfort in the hand

The handle is designed with **ergonomics and a secure grip** in mind. The soft finish ensures that even a long walk does not tire the hand. **The non-slip material** makes it easier to hold the leash in the rain or cold. The leash does not slip and fits well in the hand - important when the dog suddenly jerks.
