Full product description

RF Elements Horn TP 60 degree sector antenna with TwistPort connector

The **Horn HG3-TP-S60** sectorial antenna of **RF Elements** with a beam width of 60 degrees, horizontally and vertically, has a gain of 10 to 20 dBi. The presented **antenna from the Horn TP series** offers exceptional performance, typical for RF products. This antenna in a compact housing is characterized by its **long range and provides symmetrical transmission** coverage of a specific area.

Revolutionary TwistPort connector

All antennas included in the valued **SH-TP** series equipped with unique **TwistPort** ports, a patented wavelength guidance connector. **TwistPort** connectors are virtually lossless and represent a revolutionary advance in wireless system scalability and deployment convenience. The **SH-TP** antennas are compatible with any radio devices equipped with the TwistPort quick-connector. Symmetrical conical antennas offer **perfect noise attenuation and highest scalability**. These compact devices are characterized by a symmetrical beam pattern and no side beams. SH-TP antennas are ideal for high density AP clusters and radio collocation.

Improved second generation

The second generation symmetrical conical antennas offer **improved performance and design**. Modifications have been introduced in the antennas, i.e. a lighter antenna body and a more modern antenna bracket. **The shielding is made of resistant material**, so the most demanding conditions are not a problem.
