Referention number: DNFXFKSKDPL

**Full product description**

**CPE enclosure with built-in 14dBi gain antenna**

StationBox XL is a **external CPE** enclosure with a built-in dual high gain polarization antenna with 10-20 dBi and 2.4 GHz band frequency.  
**StationBox XL has been designed for easy integration with various MikroTik routers such as: RB92x, RB91x, RB71x and RB41x.**  
The enclosure can also support RB433 with three radio cards to power external antennas.

## New positioning system

StationBox XL has a revolutionary mounting solution. The enclosure is equipped with RF NanoBracket elements, a 3-axis positioning system with a ball hinge that allows the CPE position to be adjusted in three planes. **You can achieve the best possible link performance** and minimize the loss of polarization mismatch thanks to a precise adjustment level.

## Excellent quality

StationBox XL is designed with durability in mind. For the StationBox series, the best quality materials were used, such as UV-resistant ABS plastic. Aluminium casting and stainless steel were also used.
