Full product description

Outdoor housing with built-in high gain double polarisation antenna

StationBox XL is an outdoor enclosure with a built-in high gain dual polarization antenna, a larger version of StationBox Mikro. Pigtails are included in the antenna. The device has been designed for **easy integration** with various **MikroTik** brand routers and to be implemented as a medium-range **CPE** or **PTP** connections over short distances. The casing can support RB433 with 3 radio cards to power other external antennas. **Two models offer 19 dBi gain in 5 GHz band or 14 dBi gain in 2.4 GHz band.**

Reinforced antenna design

StationBox XL has a built-in dual polarization antenna. **RF Elements** antennas are constructed using the latest technology. The **device meets the requirements of clients** in terms of increased signal amplification, as well as front to back ratio and reduced side beam in the antenna radiation pattern.

3-axis positioning system

StationBox is delivered with the manufacturer's best installation solution. **3-axis positioning system** allows the StationBox to be positioned in three axes using a ball hinge. With the ability to set the azimuth, height and rotation of the antenna, you will release **the maximum possible wireless transmission efficiency**.

Easy installation

StationBox XL can be easily mounted on a pole or wall. The latest generation of the 3-axis bracket uses a ball hinge with a special quick locking system, **which can be operated with one hand, even with winter gloves**.
