Full product description

Station Box RF Elements

StationBox ALU is an outdoor enclosure with IP55 protection for wireless platforms and access points, IP66 protection can be achieved by sealing the drain hole. The casing is made of die-cast aluminium and coated with UV resistant paint, providing increased protection against radio interference and weather conditions.

Integration with MikroTik RouterBoards

The internal mounting plate has preformed holes enabling easy installation of various popular boards, such as MikroTik RouterBoard RB922, RB912, RB911, RB711, RB433, RB411 and Alix. StationBox is also compatible with **Ubiquiti Networks** products.

High quality

The StationBox ALU is exclusively made of high quality materials, and these include die-cast aluminium, UV-resistant paint and stainless steel fittings. The enclosure has fastening screws that do not fall out when loosened.
