Full product description

Universal housing

StationBox is a universal enclosure designed for outdoor installations. The main advantage is its **universality consisting of compatibility with various types of devices from many manufacturers**. StationBox consists of 4 parts made of durable plastic, and after installation all components form one coherent whole. The external enclosure is also equipped with a compact mounting bracket.

NanoBracket can be used

It is possible to use NanoBracket, which allows the housing to be positioned in any direction within 90° on each side. The design of the StationBox is very simple and functional.

A simple and economical solution

The main purpose of this product is not only the installation of the device, but also the simplicity of sequential operation. StationBox is a first-class and cost-effective solution for installing antennas and equipment outdoors, as evidenced by its unique features, including long life.
