Price: **1,699.00 zł** gross / 1,381.30 zł net

Manufacturer: ROBOROCK

Referention number: DNXXGFMOPLRMNHK

Product features

Height	96.5 mm
Width	350 mm
Depth	350 mm
Runtime	150 min
Shape	Round
Remotely operated	Yes
Battery capacity	5200 mAh
Battery voltage	14.4 V
Power consumption (typical)	58 W
Automatic base station return	Yes
Base station	Yes
IFU / User manual	Yes
Wet mopping	Yes
AC adapter included	Yes
User guide	Yes
Warranty card	Yes
Base station functions	Charging
AC input frequency	50 Hz
AC input voltage	100 V
Product colour	White
Dust container type	Bagless
Diameter	350 mm

Full product description

Cleaning robot Xiaomi Mi Robot Vacuum 2

Xiaomi Mi Robot Vacuum 2 is a wireless, portable, **intelligent home appliance**, an excellent helper in cleaning your home. This **robot cleaning Mijia Roborock** is an improved version of older models in this series. Thanks to the increased battery capacity its operation is **more efficient** and faster. The cleaning robot from Xiaomi guarantees very thorough vacuuming and floor cleaning, without any effort on your part. Choose a modern solution and experience a new dimension in cleaning with the Roborock robot.

Sweeping and mopping function

Mijia Roborock Robot Vacuum Cleaner 2 combines two functions, which will first **sweep the floor** and then **wet wash it** with a mop. Thanks to the built-in tank, this device can absorb water and provide **effective cleaning**. Maximum cleaning effect is possible thanks to the main brush with V-bristles, with a speed of 1350 rpm, and the Z-shaped side brushes, with 330 rpm. The mop is located close to the water tank and is as wide as the main vacuum cleaner brush.

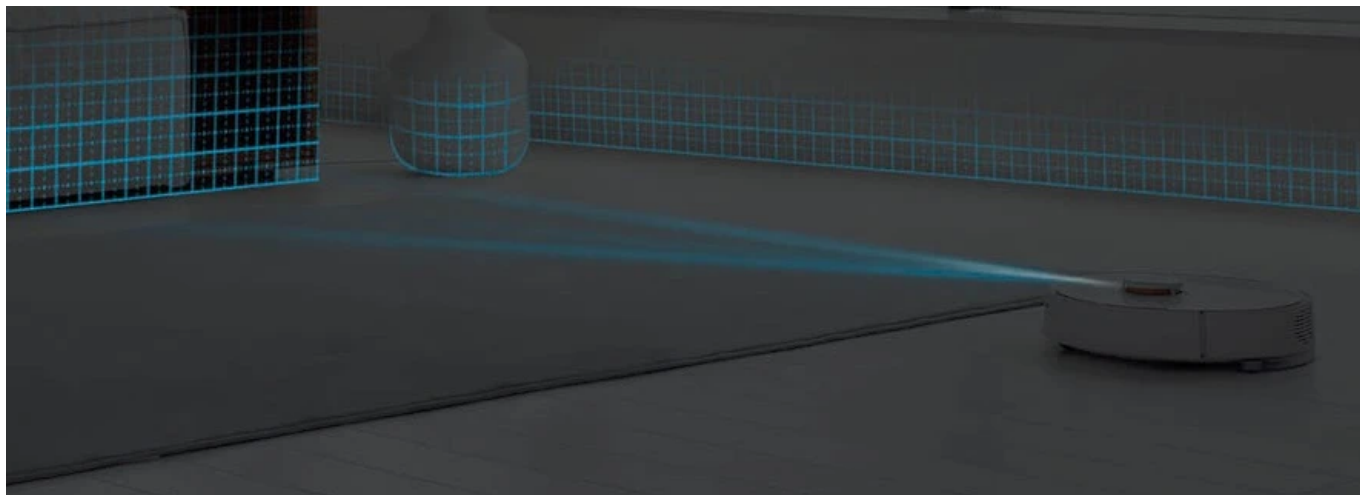

Mopping water tank

To ensure effective cleaning, **Mija Roborock Robot Vacuum Cleaner 2** is equipped with a special water tank. It is designed to be easy to use, without any installation problems. The water from the tank moistens the microfibre material. In this mode the device can operate for about **40-50 minutes**. The intelligent system controls the water level itself.

Laser distance sensor (LDS)

The device has a special **Laser Distance System**, which allows you to monitor the environment (viewing angle is 360 degrees) and scan the interior with **LAM algorithm**.

Easy to operate

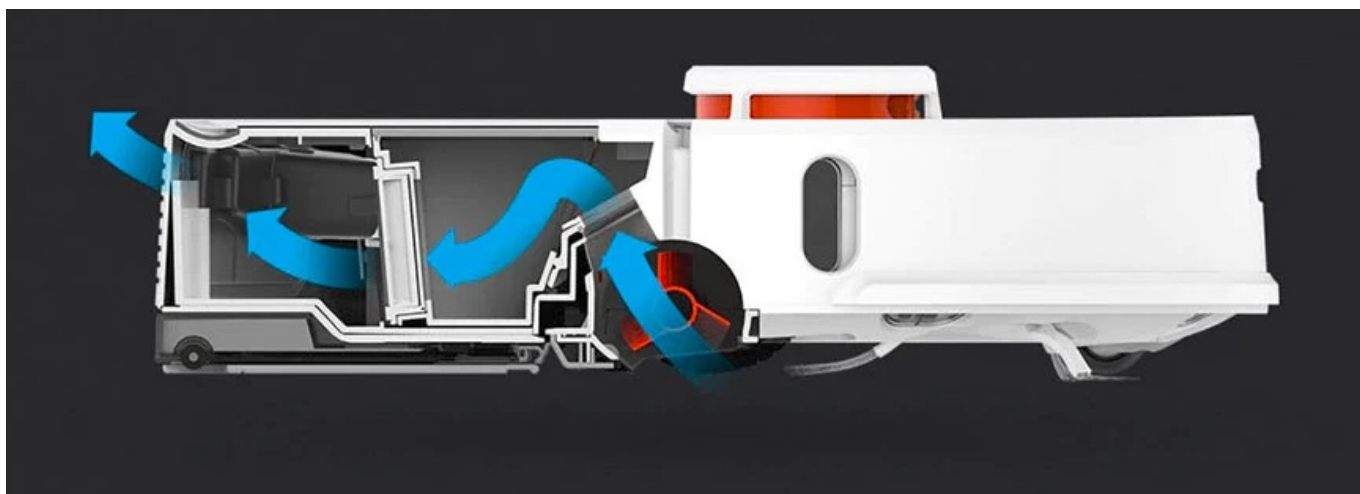

The **Mijia 2** vacuum cleaner can be synchronized with the special **Mijia** application. You will be able to see a map of your apartment or house and direct the vacuum cleaner to any place by pointing it on the phone screen. The device can also plan the cleaning route by itself.

Equipped with 13 sensors

To ensure collision-free and **effective cleaning**, the device is equipped with **13 built-in sensors**, including an LDS sensor. An improved sensor system with soft bumpers on the housing helps protect the device from damage. 4 edge sensors prevent the device from falling from a height. An additional wall sensor always keeps the device within 10 mm of the wall. If the device is lifted, the special sensor is activated and the vacuum cleaner stops working. The charging sensor, using infrared technology, ensures effective charging of the robot.

Engine protection against hair and fur

Some dirt can damage the engine, such as hair sucked into it. To avoid this, the main brush, the wheels and the Xiaomi Mi Robot Vacuum 2 side brush have a **structure to prevent hair from being pulled in**, this helps **protect the device** from overheating and damage.

Quiet work

Forget about the noise! Mijia Roborock **works extremely quietly**.

Washable filter

E11 class E11 filter with waterproof Teflon coating ensures effective cleaning all year round. To ensure the **maximum performance** of the device, the manufacturer recommends replacing the filter at least once a year.

Low Noise Design

Soundproof cotton with multihole sieve

Washable Filter

No need of replacing frequently

Note: the normal washing frequency is to wash one time for a week

High capacity battery

The 5200 mAh battery allows for **2.5 hours of operation on a single charge** and cleaning up to 250 square meters of living space.

Improved charging base

180 degrees of infrared range is about 4 meters. The device accurately locates the charging base. It also has protection against surges and short circuits. **The vacuum cleaner monitors the battery charge level** and when it is low, it will independently find the docking station using 2 laser sensors.
