Price: **1,999.00 zł** gross / 1,625.20 zł net

Manufacturer: ROBOROCK

Referention number: DNXGFOPLKRMMPI

Product features

Height	96.5 mm
Width	353 mm
Depth	350 mm
Runtime	150 min
Battery capacity	5200 mAh
Power consumption (typical)	58 W
Threshold climbing (max)	20 mm
Noise level	58 decibel
Battery life	250 m2

Full product description

Xiaomi Mijia Roborock Vacuum Cleaner S6 - Cleaning robot

Compact, wireless and **intelligent home appliance**, combining the functionality of a maintenance-free **vacuum cleaner and mop** in one, making it an excellent cleaning aid. **The latest model** has all the advantages of its predecessor from the **series S5**, enriched with many innovations that make cleaning even easier and more effective. **Roborock S6** will vacuum and wash the floor simultaneously.

14 built-in sensors and new brush

Thanks to the built-in sensors, the device doses the right amount of water during mopping to ensure even more effective cleaning. **The Turbo Brush** is made of soft, dense bristles (230% thicker than in the S5 series) from **DuPont**. Made of rubber, the five-arm **horn brush**, together with the turbo brush, makes **cleaning even more effective** and at the same time more delicate for floors.

Control by application

The **Xiaomi Home** application, available in Polish, **has been improved** so that the user will not only be able to see a map of their apartment or set a cleaning schedule but also: create virtual walls, start cleaning the given zone, automatically divide the apartment into individual rooms

and clean only selected rooms, save several different maps, e.g. for different floors of the house or several apartments, the application allows for full control of the robot from anywhere in the world.

Greater suction power

Suction power of **2000 Pa** guarantees high efficiency in dirt collection. **The tornado system** coordinates the side and turbo brush, ensuring thorough floor cleaning. The vacuum cleaner easily recognizes the carpet, adjusting the suction power to the surface to be cleaned.

Modern navigation technology

Roborock S6 uses the most **advanced laser distance measurement technology** (Laser Distance System) to navigate, allowing you to monitor the environment (360 degrees) and create interior maps using the **SLAM** algorithm. This makes the vacuum cleaner extremely effective and accurate. The laser has been additionally equipped with a bumper system, reducing the risk of damage in case of contact with furniture.

New base station

Overvoltage or short-circuit protection guarantees **high safety** and a longer life of the vacuum cleaner. The improved **S6** model station makes it possible to hide the power cord inside it, which not only improves safety but also aesthetics. **The robot's battery level sensor** monitors the state of charge of the vacuum cleaner. This allows the device to return and dock to the station by itself, if necessary using infrared navigation, starting the battery charging process. Once charged, it automatically returns to the interrupted cleaning process.

Stronger battery and quieter operation

The Roborock S6 is even **50% quieter** than its predecessor, making its work even less noticeable, and the vacuum cleaner can clean at different times of day or night without disturbing the household. **E11 class E11** HEPA filter, with a waterproof Teflon coating, provides **up to 95% filtering efficiency** even after one year of use. **A powerful lithium-ion battery, with a capacity of 5200 mAh, allows the robot to work up to 3 hours continuously, which gives up to 250 m2 of cleaned apartment.**
