Price: **499.00 zł** gross / 405.69 zł net

Manufacturer: ROIDMI

Referention number: DNXXGMNNERMMJJ

Full product description

Miro hair dryer with ionization: fast drying, intelligent temperature control and hair protection

The Miro high-powered ionization hair dryer is equipped with a powerful 105,000 rpm motor that generates wind speeds of up to 65 m/s for fast drying in 3 minutes. It has a built-in intelligent temperature control system with 3 temperature settings. The advanced heat control function measures the temperature of the airflow to prevent extreme heat damage. At the same time, 20 million negative ions are generated to deeply penetrate the hair, providing long-lasting protection and making hair frizz-free and shiny.

Innovative design and RGB backlighting

Featuring LED lighting, the Miro dryer presents an innovative feature that not only adds aesthetics, but also informs you of the current temperature. With four different lighting colors that respond to the temperature, the user has full control over the drying process, minimizing the risk of overheating the hair. The Miro hair dryer provides a modern, stylish and attractive look. The unique design of the interactive LED lighting makes drying stylish and dynamic at the same time.

High airflow for fast drying

Miro is equipped with a super-fast motor that can produce air speeds of up to 65 m/s. It takes only 3-5 minutes to dry hair, which is about the time it takes to drink a cup of coffee. ROIDMI Miro's extremely quiet, high-speed 105,000 rpm motor delivers unparalleled air speed and volume. ROIDMI has chosen a high-performance brushless high-speed motor for high efficiency and reduced noise levels. It can run trouble-free for up to 16 years.

6 modes of operation

With 3 temperature settings (natural/warm/hot air) and 2 wind speeds (strong/mild), you can easily switch between different settings by pressing a button. The Miro has an automatic memory function that allows the user to save the desired temperature for later use. Temperatures and wind speeds can be set according to different preferences. The variety of temperatures meets the daily needs of different hair styles. Miro is suitable for both home and professional use.

21 million active negative ions

ROIDMI Miro can generate 20 million active oxygen negative ions to reduce static electricity in the hair and create a protective layer that retains the hair's natural moisture content and nurtures hair roots for a smooth and shiny result. Dry hair faster than ever, reducing frizz and increasing shine.

Low noise level

The 6-layer noise dampening technology of the Miro high-speed hair dryer reduces noise levels by 50% compared to conventional hair dryers. The use of a brushless motor and optimized air duct design reduce friction noise to less than 69dB(A).

Compact design and light weight

Weighing just 315 g, the Miro hair dryer is extremely small and portable. Its diameter is only 9.1 cm and the weight is evenly distributed, making the dryer fit perfectly in the hand. As a result, even holding the dryer for long periods of time is not cumbersome. The smooth coating provides durable protection against scratches and abrasion, as well as better heat insulation to prevent overheating. It is ideal for personal use or as a gift for a loved one.

Magnetic attachment of caps

The Miro features a magnetic nozzle attachment system, which allows the nozzle to rotate freely 360°, making attachment extremely easy and convenient. It comes with a concentrating nozzle, ideal for directing a highly concentrated stream of air, perfect for fast and efficient styling.

Detachable handle for easy cleaning of the filter

The air intake is located on the handle of the hair dryer to reduce its weight. The ROIDMI Miro features a 0.2mm thick magnetic double-layer filter that prevents hair from being sucked in and is removable for easy cleaning.
