Full product description

Sensibo Elements - smart indoor air quality monitor

Sensibo Elements is a monitor that **detects harmful air pollutants** and helps you improve the air quality in your home. With it, you can prevent headaches, fatigue, skin irritation and other health problems associated with breathing unclean air.

Key features of Sensibo Elements

Measurement of six air quality parameters

Sensibo Elements measures six air quality parameters: temperature, humidity, volatile organic compounds (VOCs), fine particulate matter (PM2.5), carbon dioxide (CO2) and ethanol. These parameters affect comfort, health and safety in a room. Sensibo Elements shows the current state of the air with a color-coded indicator and assigns a score from 0 to 100. You can check this data using the mobile app or voice assistant.

Alerts and tips for improving air quality

Sensibo Elements sends you alerts and tips for improving air quality when pollution levels rise. You can find out what the source of the pollution is, its health effects and what steps to take to reduce it. You can also set your own pollution thresholds and receive alerts when they are exceeded.

Wireless installation and integration with other Sensibo devices

Sensibo Elements is a wireless and battery-powered device that can be placed anywhere in the room. **You can put it on a stand or stick it to the wall.** Sensibo Elements works with the Sensibo **Pure** air purifier and the Sensibo **Air** conditioner controller to create a comprehensive room climate management system. You can use the Sensibo **Pureboost** function, which automatically turns on the air purifier when pollution levels exceed a set threshold. Or you can use the Sensibo **Climate React** function, which automatically adjusts the temperature and humidity to your preferences. You can have multiple Sensibo units in different rooms and manage them with one app.
