Full product description

Sensibo Pure - Intelligent air purifier with HEPA filter

Sensibo Pure is the most advanced air purifier on the market, combining **high filtration efficiency, intelligent controls and elegant design**. Sensibo Pure provides a healthy and comfortable environment in any room, automatically adapting to changing needs.

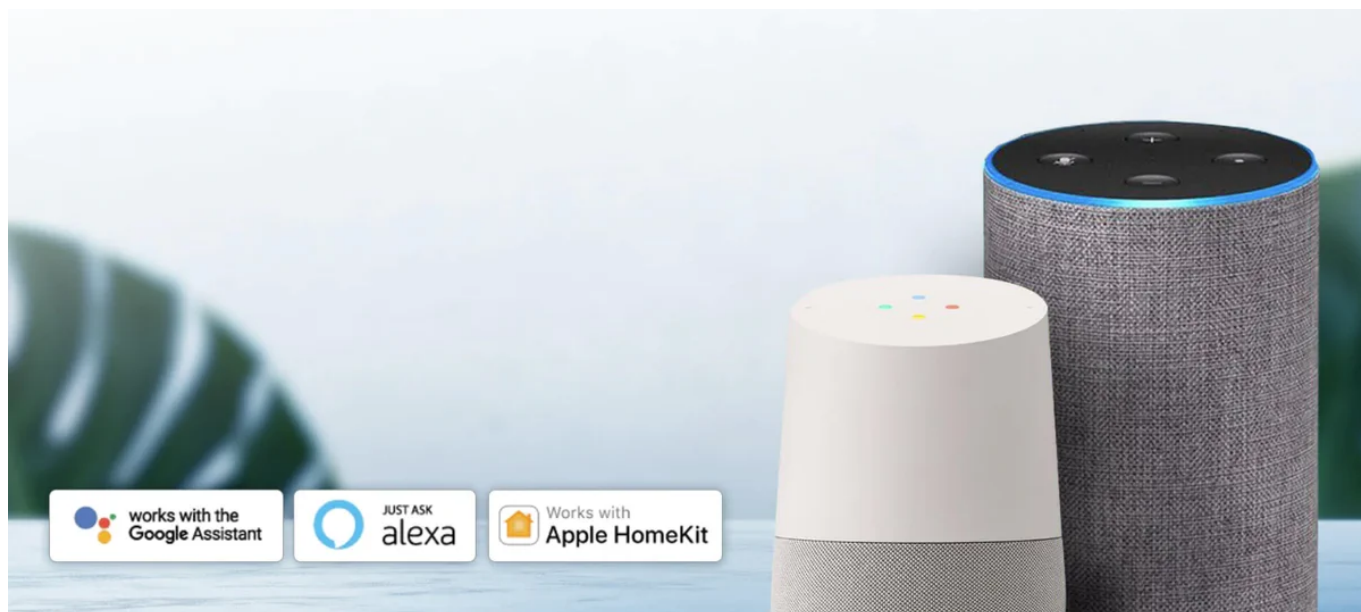

Key features of Sensibo Pure

Multistage filtration

Sensibo Pure uses a **multi-stage filtration system** that consists of a **prefilter**, **True HEPA filter** and **activated carbon filter**. The pre-filter traps larger dust and hair particles, the **True HEPA filter removes 99.97% of fine pollutants** such as viruses, bacteria, mold, pollen and allergens, and the activated carbon filter absorbs unpleasant odors and harmful gases. The filters are **easy to replace and have a long life**.

Intelligent control

The Sensibo Pure can be controlled via the **Sensibo app** or by voice with **Apple HomeKit**. The Sensibo app allows you to remotely turn the unit on and off, **set schedules**, monitor indoor and outdoor air quality, **receive filter status notifications** and more. **Voice control with Apple HomeKit** enables simple and natural commands, such as "Hey Siri, turn on Sensibo Pure" or "Hey Siri, how's the air quality in the living room?".

Unique Pure Boost™ technology

Sensibo Pure is equipped with unique **Pure Boost™ technology**, which regulates airflow based on factors such as geolocation, indoor and outdoor air quality, weather and pollution levels. Pure Boost™ ensures optimal performance and energy savings by adjusting the fan speed according to current needs. If you also have a Sensibo controller for your air conditioner or heat pump, Pure Boost™ can use the air conditioner's fan to better distribute purified air around the room.

Health and comfort in your home

Sensibo Pure is a smart air purifier with HEPA filter that provides a healthy and comfortable environment in any room. Sensibo Pure has high filtration efficiency, smart controls and a sleek design. Sensibo Pure is easy to operate and maintain, and with Pure Boost™ technology, it saves energy and protects against SARS-COV-2.
