Full product description

SIAE Alfoplus 24 GHz radio with two 0.6m antennas

The SIAE Alfoplus radiolink is a unique product that will provide you with a reliable Internet connection with incredible speed and reliability. Operating in the specially licensed 24 GHz band (24 - 24.25 GHz to be exact), this radiolink delivers extremely fast connectivity. The SIAE Alfoplus radiolink is the perfect solution for anyone who requires a fast, reliable and weatherproof Internet connection.

High throughput

In terms of performance, the Alfoplus radiolink can reach a throughput of 500 Mbps in full duplex, and as much as 1 Gbps for a 70B frame. That means you'll be able to transmit data at fiber speed.

Gigabit Ethernet port with PoE power support

The radio is also equipped with many useful features. It has a gigabit Ethernet port with Power over Ethernet (PoE) technology, which means you can supply power to the device over the same cable that transmits data. It also has an SFP port and an input for optional DC power, giving you the flexibility to tailor the device to your needs.

Weather resistance

The housing of the radiolink is resistant to bad weather conditions, so you can freely use it outdoors without worrying about the durability and reliability of the connection.

Flexible power options

When it comes to power, the Alfoplus radio can operate through both a PoE port and an AUX power port. The voltage range it supports is from 35 to 60 V DC, which means you have a wide range of power options for the device.
